## **GEN SERIES OF BOOSTER SETS GENERAL INTRODUCTION – PRODUCT DESCRIPTION**

The GEN booster sets are built in conformity with EN12845 for automatic sprinkler systems and with UNI10779 for hydrant systems.

In accordance with the above standards, all the main components of the booster set are factory connected and assembled.

The configuration of the booster set depends on the number of pumps installed and on the type of electric motor or diesel engine, consistently with the type of supply chosen for the fire-fighting system from among those described in the standard. The water supply can be single, superior, duplicated or combined. Two main service pumps, one backing up the other, are normally installed for fire-fighting systems. The choice of electric motors or diesel engines depends on the level of reliability required from the system. In practice, fire-fighting booster sets have one electric service pump and one diesel service pump.

Point 10.2 of EN 12845 states that for superior or duplicate water supplies, and if more than one pump is installed, no more than one service pump can be driven by the electric motor.

This concept means that mixed assemblies, comprising electric or diesel pumps, have to be installed.

This does not mean that it is not possible to have two electric pumps, one backing up the other, if the ascertained fire risk is low (single supplies) or if a diesel generator is already incorporated in the system.

The Lowara GEN series of booster sets are therefore configured according to system requirements and initial considerations. They are also factory tested and comprise the following:

- One or two horizontal or vertical service pumps with the same hydraulic performance level, driven by an electric motor.
- Two horizontal service pumps with the same hydraulic performance level, driven by an electric motor and a diesel engine.
- A horizontal service pump driven by a diesel engine.

The booster set is built and completed with the following main components:

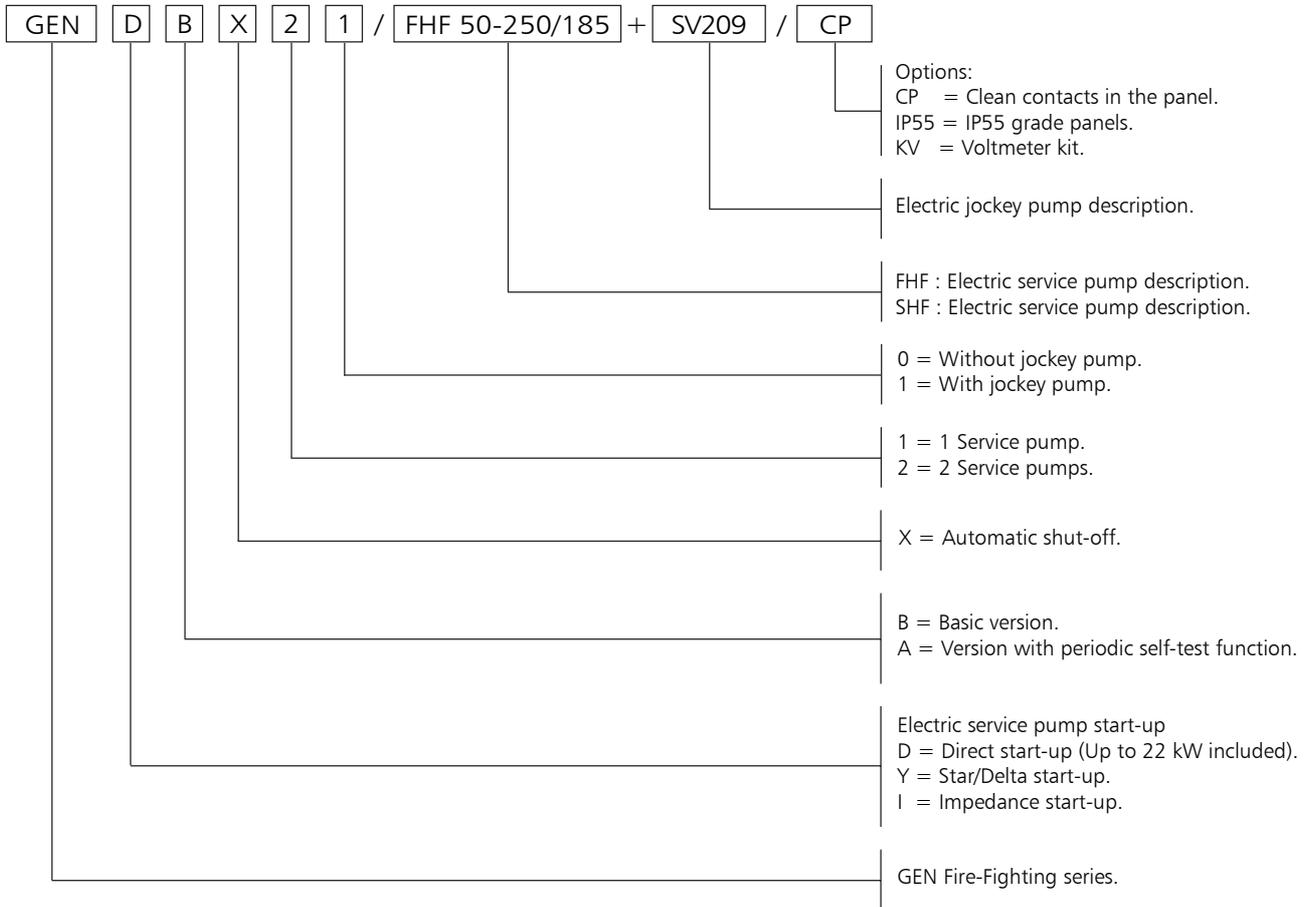

- A Lowara SV series jockey electric pump (if required), controlled by an electric panel in the automatic mode. The jockey pump is automatically started and stopped by its pressure switch in order to restore supply pressure. This prevents the service pumps from starting and activating the main alarms.
- A control panel for each service pump.
- Two pressure switches for each service pump (if the first fails, the second repeats permission for the pump to start).
- On the discharge side of each service pump there is a on-off valve, a check valve and a tap for connection to the priming circuit for suction lift installations. Moreover, if the service pump works with a closed discharge line, a water recirculation tap has been applied to the pump body in order to prevent the pump from overheating.
- Discharge manifold connected to each service pump, fitted with a weld-on flange for connection to the system.
- Single base containing all the booster set components within a compact structure and ready for installation.

To complete the pump station as requested by the standard, the GEN series of booster sets are fitted with the following accessories :

- Suction side kit.
- Flow meter.
- Alarm panel.
- If diesel engine pump is installed, set of spare parts for diesel engines.
- Priming tank with accessories (for suction lift installations).
- 24L diaphragm tanks.

## IDENTIFICATION CODES

## REFERENCE STANDARDS

- The Lowara fire-fighting booster sets are EC certified in conformity with the following directives:
  - Machine Directive 98/37/EC.
  - Low Voltage Directive 2006/95/CE.
  - Electromagnetic Compatibility Directive 89/336/EEC and subsequent modifications.
- The electric pump performance is declared to be in accordance with the following standard:
 

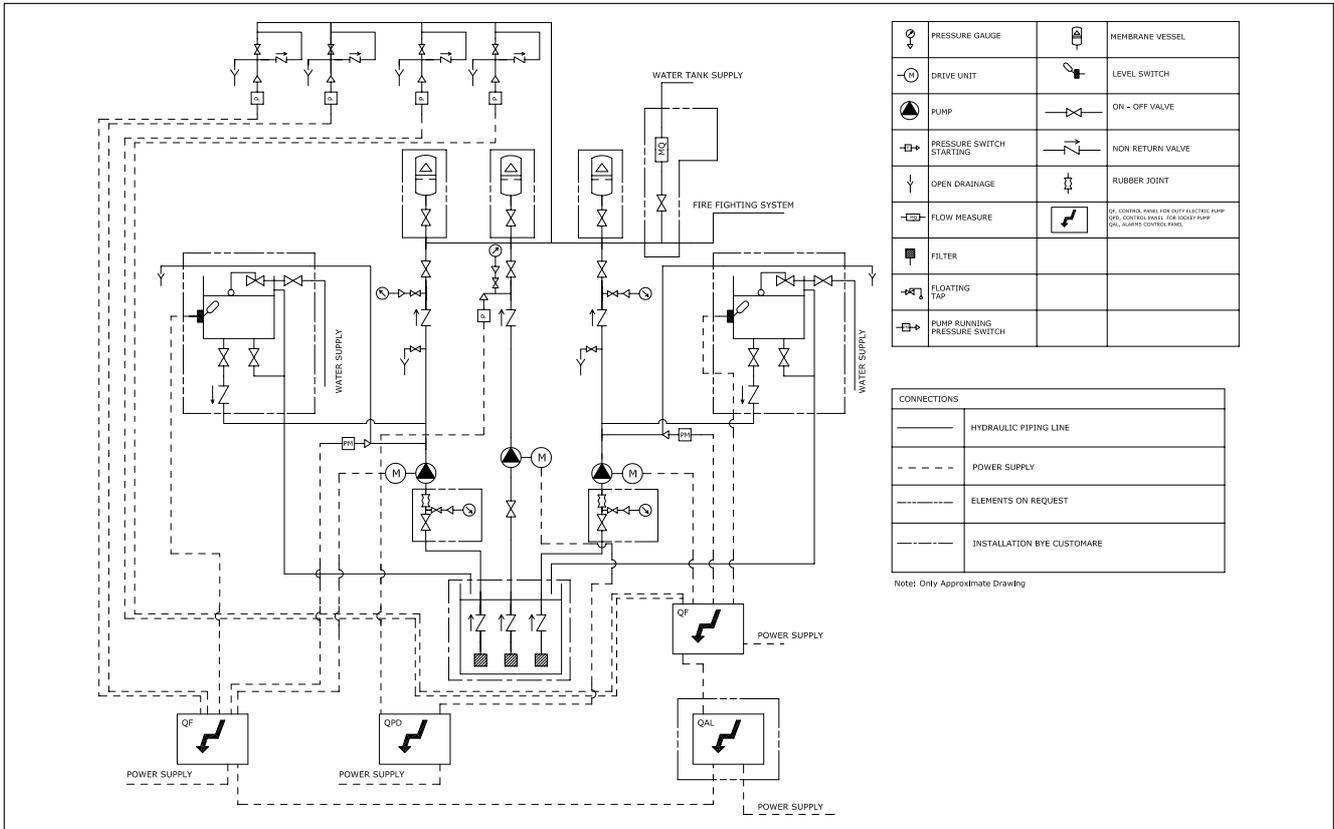

ISO 9906-A Rotodynamic pumps – hydraulic performance tests and acceptance criteria.
- The fire-fighting booster sets conform to the European fire-fighting Standard EN 12845-2009.  
 The automatic shut-off versions also conform to the UNI 10779 Italian Standard for hydrant systems.

## **CHARACTERISTICS OF THE PUMPS USED IN THE GEN SERIES OF BOOSTER SETS**

### **SV2, 4, 8 ELECTRIC PUMPS (JOCKEY PUMP)**

- Multistage centrifugal vertical electric pumps. All metal parts in contact with pumped liquid are made of stainless steel.
- Version F: round flanges, in-line discharge and suction ports, AISI 304 (Standard version).
- Version N: round flanges, in-line discharge and suction ports, AISI 316 (Available on request).
- Reduced axial thrusts enable the use of off-the-shelf **standard motors. The performance levels of Lowara PLM surface motors lie within what is usually referred to as efficiency class 1.**
- Mechanical seal according to EN 12756 (ex DIN 24960) and ISO 3069.
- Easy maintenance. No special tools required for assembly or disassembly.
- For other characteristics, consult the relative dedicated technical catalogue.

### **FHF32, 40, 50, 65, 80, 100, 125 PUMP SERIES**

- Single impeller cast iron horizontal centrifugal pump and shaft made of AISI 316L stainless steel. End suction and radial discharge ports.
- Impeller: made of AISI 316L stainless steel laser technology welded, for sizes 32, 40, 50, 65-125, or cast iron for sizes 65-160, 65-200, 65-250, 80, 100, 125.
- Hydraulic sizes and nominal diameter DN of suction and discharge ports according to EN 733 (ex DIN 24255).
- Flanges according to EN 1092-2 (ex UNI 2236) and DIN 2532.
- Motor: motor/pump coupling with bracket, support, flexible coupling with spacer coupling and aligning and anchoring base. **The performance levels of Lowara PLM surface motors lie within what is usually referred to as efficiency class 1.**  
Performance levels according to EN 60034-1.
- **“Back pull out”** design, impeller, adaptor and motor can be extracted without disconnecting the pump body from the pipes.
- For other characteristics, consult the relative dedicated technical catalogue.

### **SHF32, 40, 50, 65, 80 PUMP SERIES**

- Single impeller horizontal centrifugal pump with pump body and shaft made of AISI 316L stainless steel. End suction and radial discharge ports.
- Closed impeller made of AISI 316L stainless steel laser technology welded (for sizes 25, 32, 40, 50, 65-160/75 and 65-160/110A) or AISI CF8M cast stainless steel.
- Hydraulic sizes and nominal diameter DN of suction and discharge ports according to EN 733 (ex DIN 24255).
- Flanges according to EN 1092-1 (ex UNI 2236) and DIN 2532.
- Motor: motor/pump coupling with bracket, support, flexible coupling with spacer coupling and aligning and anchoring base. **The performance levels of Lowara PLM surface motors lie within what is usually referred to as efficiency class 1.**  
Performance levels according to EN 60034-1.
- **“Back pull out”** design, impeller, adaptor and motor can be extracted without disconnecting the pump body from the pipes.
- For other characteristics, consult the relative dedicated technical catalogue.

**MAIN COMPONENTS****FIRE-FIGHTING SETS WITH HORIZONTAL ELECTRIC PUMPS**

- On/off valves on the delivery side of each pump, ball valves with lever handle for diameters up to and including 1" 1/2 butterfly valve with lever handle from DN50 to DN100 diameter, butterfly valve with handwheel and reduction manual gear for DN125 diameter and above. Device for monitoring ON/OFF status included. Electrical connections by customer.  
(Lockable kit available on request).
- Recirculation device for each service pump.  
The re-circulation device allows a minimum capacity in order to prevent the pump overheating when working with closed delivery. It includes the activation pressure switch for the alarms of the pumps running, the test valve for checking the seal of the check valves, the couplings for any connecting pipes to the priming tank in the case of suction lift installation. The connection of each re-circulation to the suction tank or the priming tank is to be seen to by the person installing the equipment.
- Pressure gauge on the delivery side of each service pump between check valve and on/off valve.
- Inspectable check valve on the discharge side of each pump. Threaded coupling for diameters up to 1"1/2 included, flanged coupling for larger sizes.
- Painted iron delivery manifold (PN 16) and threaded stubs with relative caps for connecting any 24 litre membrane tanks. Blind and welding zinc-plated flanges.
- Two start-up pressure switches for every service pump.  
For the electric service pumps, start-up takes place through the pressure switch, but it must be manually stopped using the key-operated selector switch on the panel (excluding the version with automatic shut-off). For the electric jockey pump, if present, both start-up and stopping are determined by the pressure switch.
- Start-up pressure switch circuit for the service pump, including connecting pipes for the delivery manifold, recirculation circuit.  
This circuit includes on/off valve, a non-return valve, a discharge valve and various pipe fittings. The configuration of the circuit allows the pressure switch to intervene also when the relative on/off valve is closed.
- Various pipe fittings (copper, zinc-plated steel).
- Base made of bent sheet or structural iron with epoxy powder painting RAL 5010.
- Control panel frame made of structural iron with epoxy powder painting RAL 5010.
- Electric panel for each electric service pump.  
Starting: Direct (DOL) up to and including 22 kW, star/triangle from 30 kW up.

A panel mounting bracket kit for floor mounting and a jockey pump kit can be supplied on request.

The control panels for the electric pumps up to 55 kW power supply are fixed on bracket. For higher powers, the control panels for electric pump service are floor mounted, instead the jockey electric pump panel is wall mounted fixed.

## **SUCTION KIT**

### **The set is supplied with its suction side free from components.**

On request, for the SUCTION side of the individual service pump, TWO versions are available according to the system's installation type:

### **• POSITIVE SUCTION HEAD and SUCTION LIFT KIT**

Kit suitable for positive suction head or suction lift installation.

The suction side of the individual pump includes:

- Anti-vibration joint to attach to the pump inlet.
- Eccentric cone or flanged stub pipe.
- Vacuum pressure gauge.
- On/off butterfly valve with lever handle for diameters up to DN100, butterfly valve with handwheel and reduction manual gear for DN125 and higher. Device for monitoring ON/OFF status included.  
Electrical connections by customer.  
(Valve lock kit available on request).
- Weld-on flange.

Conforming to the requirements of the EN 12845 Standard (chapter 10.5 and chapter 10.6).

These requirements are connected with the type of installation and the measurement of the piping sections. (see tables on pages 124-127).

## **OTHER VERSIONS**

As well as the basic GENDB versions (direct start-up), GENYB (star triangle start-up), GENIB (impedance start-up), the following versions are also available:

### **• GEN..A**

With periodic self-test function.

There is a self-test circuit including a weekly clock on the electric panel of each electric service pump. For the time and date pre-set, the pump is started up and kept functioning for 1 minute. During this interval the check circuit checks that the pressure in the re-circulation circuit closes the pressure switch contact of the pump which is running. In the case of irregularities, the relative auxiliary self-test alarm relay available for remote signalling is activated and memorised.

The EN12845 Standard does not provide for the presence of a self-test circuit but asks for periodic checks to be carried out by the user, hence the periodic self-test function cannot substitute the above checks.

### **• GEN..X** (For fire hydrant systems, UNI 10779)

With automatic shut-off.

There is an automatic shut-off circuit on the electric panel of each electric service pump.

In certain situations, it allows automatic shut-off once the system pressure has been kept at higher values than the start-up values for at least twenty minutes.

The self-test and automatic shut-off versions are available for each type of GEND.., GENY.., GENI.. start-up and in combination between them (See identification codes page).

## ACCESSORIES AVAILABLE ON REQUEST

- Protection against dry running for the electric jockey pump in one of the following versions:
  - Float switch, in case of suction lift.
  - Probes kit in case of suction lift (needs optional probe module in the electric jockey pump).
  - Minimum pressure switch, in case of positive suction head.
- Electric panel for remote status and alarm monitoring of one or two Lowara pumps installed in GEN fire-fighting booster sets, according to EN12845.

In the electric service pump mode, the following conditions are visualised: Motor powered, pump start-up request, pump running, failure to start.

In the diesel engine service pump mode, the following conditions are visualised: switch in non-automatic position, diesel engine fails to start after 6 attempts, pump running, controller failure.

Additionally: minimum suction tank or fuel level, minimum priming tank level, on-off valve on suction and discharge side not fully open.

All the above conditions, required by EN12845, are visualised with signal LED's and buzzers.

A buzzer alarm reset button and LED tester button are included.

The control unit is also fitted out to signal the following general alarms, if present:

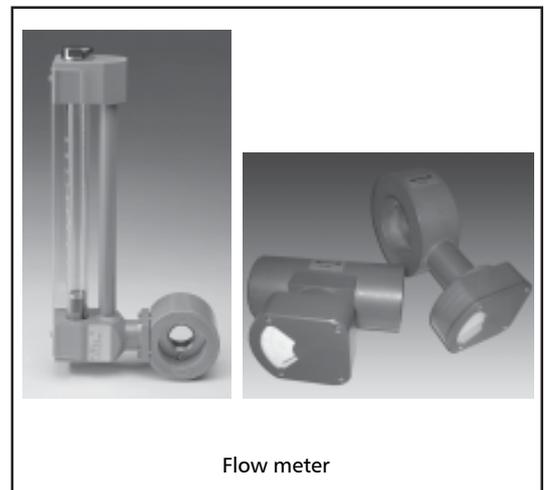

- General alarm for incorrect electrical connection in the exchange contacts of: flow meter circuit valve, discharge pump, jockey pump status.
- Fault in electrical connection in the exchange contact relative to panel 1 (electric pump/diesel engine pump).
- Fault in electrical connection in the exchange contact relative to panel 2 (electric pump/diesel engine pump).
- Jockey pump overload; - Jockey pump running; - Discharge pump overload;
- Battery low; - No communication with ModBus system.

All the above conditions are visualised with signal LED's and on the display. The customer may decide to enable the buzzer. Further information available on page 144.

- Circuit for test flow of the service pumps. Includes the direct reading flow meter (sized according to the capacity of the service pump) according to the type of flow meter, connecting piping and straight piping upline from the instrument, on/off ball valve for diameters up to and including 2" butterfly valve with lever handle from DN65 to DN100 diameter, butterfly valve with handwheel and reduction manual gear for DN125 diameter and above. ON/OFF status monitoring included.  
New model of flow meter (P6) for diameters up to and including DN80.
- Diaphragm tank with relative ball valve, in the same number as that of the pumps present, for dampening any pressure oscillations in the system. 24 litre model with maximum pressure 8.10 or 16 bar according to the maximum head of the pumps.
- Priming tank for each service pump, in the case of suction lift installation.
- Accessories for the priming tank such as float switch tap, level indicator, valves, automatic air discharger on each service pump, in the case of suction lift installation.

QAL12845 Panel

Flow meter

All the main characteristics of the priming tanks, the flow meters and the available membrane tanks are shown in the accessories section.

**SPECIAL EQUIPMENT ON REQUEST****(Contact the Sales and technical Assistance Service)**

Sets for pumping sea water with electric pumps, valves, manifold and AISI 316 piping or compatible alloys.

Non-standard supply power sets.

Sets with separate electric jockey pump supplied as a kit.

Sets with different electric jockey pump from the standard one.

Sets installed inside prefabricated boxes for outdoor use.

**Notes**

The set is supplied without a suction manifold in accordance with the EN12845 Standard (points 10.6.2.2 and 10.6.2.3) which provides for independent suction for each pump.

Please see the EN12845 Standard on fixed systems and fire extinguishing – Automatic sprinkler systems – Design, installation and maintenance?– for sizing the suction piping, define whether the installation is to be considered suction lift or positive suction head for the use limits.

The Standard ask that, whenever possible, the pumps are installed with positive suction head, otherwise priming tanks must be provided with suitable automatic devices for signalling and reintegration.

The EN12845 Standard states that the water pressure should not exceed 12 bar (point 8.2.1). In some applications it is possible to have pressures of over 12 bar (point 8.2.2).

In this case, pump sets with higher pressures than those within the regulatory limit are used.

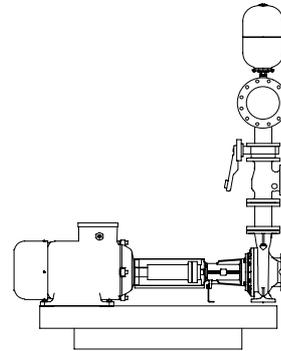

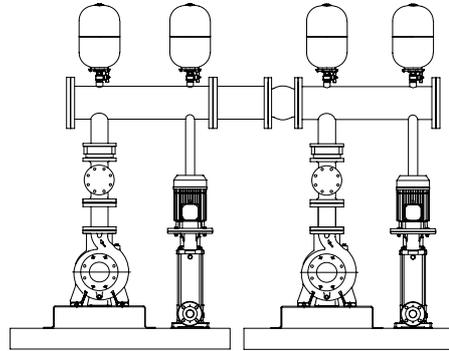

The catalogue also shows booster sets with pump closing head up to 150 metres suitable for such installations.

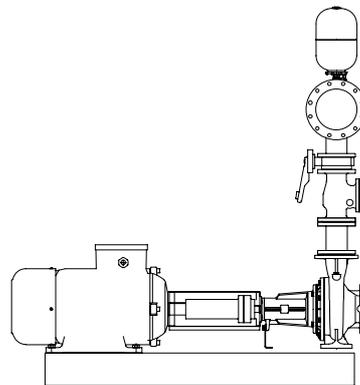

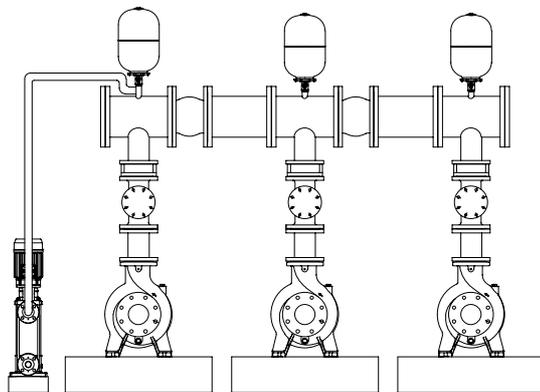

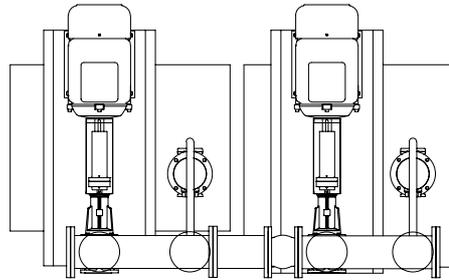

# ITT

# Lowara

## SPECIAL EQUIPMENT ON REQUEST

GENYAX22

GENYAX31

GEN-SPEC-EL\_A\_SC

## COMMAND PANEL FOR THE ELECTRIC SERVICE PUMP

Painted metal casing (IP 54) complete with:

- General door-locking switch.
- Analogical ammeter.
- "MAN – AUT – 0" selector with extractable key only in automatic position.
- Keyboard for indicating electric voltage presence, correct phase sequence (three phase power supply), start-up request, pump functioning and no start-up, through LED lamps, lamp test button and starting and stopping buttons, according to the provisions of EN12845 paragraph 10.8.6.

Inside:

- 12/24V transformer for auxiliary circuits and electronic board.
- Fuse holder and fuses for power and auxiliary circuits.
- Line contact maker (direct start-up up to 22 kW included), line and star/triangle contact makers (star-triangle start-up), line contact makers and reactance switching (impedance start-up).
- Star/triangle exchanger timer or reactance switching.
- Relay for signalling no phase.
- Auxiliary relays.
- Current transformer.
- Terminal boards.
- Clean contacts (max. 24V, 1A) for activating acoustic/visual alarms for no phase, pump on demand, pump running and start failure.
- Cable glands (excluding the versions to be fixed to the floor).
- Wiring diagram.
- On request digital trasmission card via RS485 serial by ModBus communication protocol.

## COMMAND PANEL FOR THE ELECTRIC JOCKEY PUMP

Painted metal casing (IP 55) complete with:

- General door-locking switch.
- Visual indicators for line, running, thermal shutdown.
- Manual – automatic selector – excluded.

Inside:

- Transformer for 24V auxiliary circuits.
- Fuse holder and fuses for power and auxiliary circuits.
- Line contact maker.
- Overload cut-out switch.
- Pump shut-off timer (0 ÷ 90 s).
- Terminal boards.
- Cable glands.
- Wiring diagram.

Suitable for connecting to a float switch or a minimum pressure switch for preventing dry running. An optional level control module (supplied on request) allows the connection of probes with the possibility of regulating the sensitivity according to the hardness of the water.

---

## OPTIONS AVAILABLE ON REQUEST

### CP alternative

Series of clean contacts for checking the status of the electric service pump panel, as well as the contacts already provided for signalling alarms:

- No phase
- Motor running
- Selector position MAN-AUT-0
- No start-up
- Start-up request

Series of clean contacts for checking the status of the electric jockey pump:

- Pump running
- Thermal shutdown (overload)
- No water

### KV alternative

Control panel for the electric service pump with analogical voltmeter and with phase switch.

### IP55 alternative

Electric service pump panel with extra IP55 protection.

---

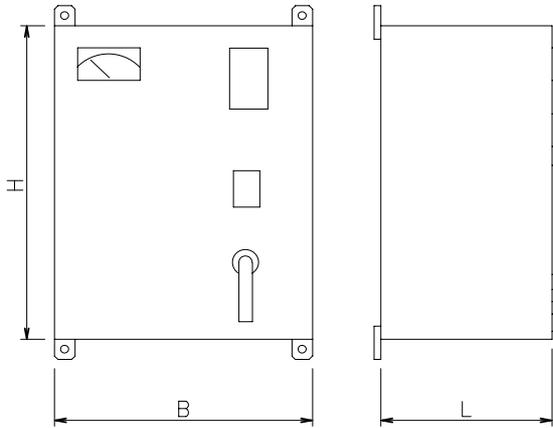

**The set is supplied already assembled, calibrated and factory tested. The set is supplied complete with an instruction manual, pump manuals and wiring diagrams for the panels.**

For the sets including floor panels, the electric panels are sent together with the set in a separate pack and supplied with 5-metre long connecting cables (longer lengths available on request). The fitter is responsible for preparing the routes and installing the cables.

## COMMAND PANEL DIMENSIONS

### SERVICE PUMP PANEL

POWER (kW)	PROTECTION CLASS	B	L	H
from 0,7 to 7,5	IP54	350	160	500
from 9,2 to 22	IP54	400	200	600
from 30 to 37	IP54	500	200	700
from 45 to 55	IP54	600	250	800
from 75 to 90	IP54	600	300	1500
from 110 to 160	IP54	800	400	1700

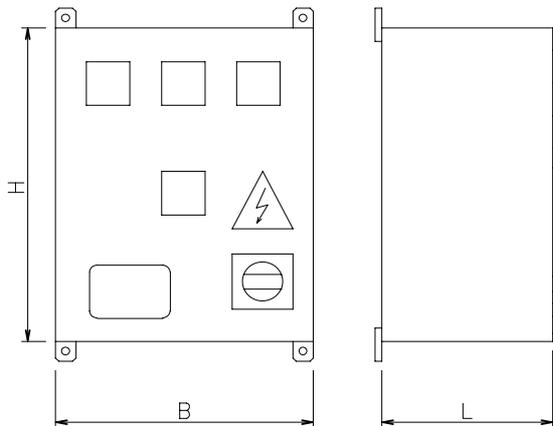

IP55: same dimensions as standard panels IP54

qe-serv-en\_d\_td

Power over 55 kW: floor cupboard

QE-ELP\_B\_DD

### JOCKEY PUMP PANEL

PROTECTION CLASS	B	L	H
IP54	250	160	300

IP55: same dimensions as standard panels IP54

qe-pil-en\_b\_td

QE-PIL\_A\_DD

\* The control panels are included in the supply.

## **GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION**

### **Criteria for choosing fire-fighting sets**

The correct choice of a fire-fighting set must consider various factors, including the correct sizing of the performance levels required for the system, local regulations and legislation, and especially the installation conditions relative to the installation site and whether a suction lift or a positive suction head is involved.

### **Choosing the type of water supply**

The type of water supply and, therefore, the type of booster set to select depends on the type of system involved and is chosen according to the risk analysis performed by the designer.

There is no written rule for identifying the correct number of pumps to install.

GEN booster sets are normally designed so that every service pump can satisfy the following requirements:

100% of rated capacity with one or two pumps installed (one in service and the other in reserve).

If three pumps are installed, the capacity of the pump will be 50% of the total rated capacity and the third service pump will be considered as a reserve. In these cases, when superior or duplicated water supplies are involved, only one pump must be driven by an electric motor. This type of configuration is available on request.

### **Suction conditions of the booster set**

The type of installation, suction lift or positive suction head, tends to affect (negatively or positively) the hydraulic performance of the pump. Remembering that EN12845 recommends against using suction lift installations, the following condition given by EN12845 must be satisfied in order to use the pump curve correctly:

$$NPSHd \geq NPSHr + 1 \text{ [m]}$$

Where: NPSHd is defined available.

NPSHr is defined requested from the pump.

As the suction check condition must be made at the max. requested flow, there can be different performance levels always respecting the NPSHd condition.

To select the booster set, consult the dedicated sections. Choice and selection. Hydraulic performance levels. Suction lift or positive suction head installation.

### **Performance levels of booster sets: using the tables**

The tables showing the hydraulic performance levels of booster sets indicate the flow values according to the risk class for precalculated systems followed by the respective pressure value. This value does not refer to pump performance but is net of the pressure drop on the pump discharge line, to the discharge manifold flange.

This field is shown in grey and the selection must be made here, where performance levels comply with the reference standard which considers the following conditions:

- Maximum water speed in the service pump discharge piping 6 m/sec.
- $NPSHd \geq NPSHr + 1$  at the maximum flow required.
- Max. difference in level of water considered 3,2 m (for positive suction head).
- Suction pressure drops due to valves, piping, suction kit 1,5 m (limit value).

The reference suction conditions are the severest and most extreme that can occur.

The values taken in the fields that are not in grey indicate booster set performance levels in areas outside the limits of the standard and must not be used to choose the set.

## GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION

### Method of selecting a fire-fighting booster set

Referring to EN 12845, after identifying the risk classes of the activity to protect and performing the precalculation method, the flow and head values required for the fire-fighting system can be obtained.

This data is used as follows:

1. Configuration of the booster set, choice of the number of service pumps and relative type of motor/engine (two pumps, one electric and the other driven by a diesel engine).
2. Installation conditions (e.g.. positive suction head), see performance levels for positive suction head installation.
3. Determination of service flow e.g.: 1100 l/min risk class OH3.

TYPE		RATED	RISK CLASS												
			OH2n					OH3n							
FHF..		POWER	Q = DELIVERY												
ELECTRIC PUMP	PUMP		l/min 0	600	700	725	850	1000	1100	1200	1300	1350	1400	1500	1600
		m3/h 0	36	42	44	51	60	66	72	78	81	84	90	96	
kW		H = TOTAL HEAD METRES COLUMN OF WATER													

4. Determining the head – e.g.: 35 m.

TYPE		RATED	RISK CLASS												
			OH2n					OH3n							
FHF..		POWER	Q = DELIVERY												
ELECTRIC PUMP	PUMP		l/min 0	600	700	725	850	1000	1100	1200	1300	1350	1400	1500	1600
		m3/h 0	36	42	44	51	60	66	72	78	81	84	90	96	
kW		H = TOTAL HEAD METRES COLUMN OF WATER													
50-125/22	50-125/D119	1 x 2,2	16,8	13,7	12,3	11,8	9,5	6,2	3,7	0,9					
50-125/30	50-125/D130	1 x 3	19,9	17,5	16,1	15,8	13,6	10,5	8,0	5,3	2,3				
50-125/40	50-125/D139	1 x 4	24,3	21,8	20,6	20,2	18,3	15,3	13,1	10,5	7,7	6,2	4,6		
50-160/55	50-160/D158	1 x 5,5	31,8	29,3	27,7	27,3	24,8	21,1	18,2	15,0	11,4	9,5	7,6		
50-160/75	50-160/D174	1 x 7,5	39,8	36,6	35,2	34,8	32,5	29,1	26,5	23,5	20,2	18,5	16,7	12,7	
50-200/110A	50-200/D197	1 x 11	50,6	45,6	43,4	42,8	39,5	34,8	31,2	27,3	23,1	20,9	18,6		
50-200/110	50-200/D209	1 x 11	58,0	52,6	50,5	49,9	46,7	42,1	38,6	34,7	30,4	28,1	25,7	20,7	

As can be seen, the required flow value enters the operating area in accordance with the standard, and the value of the corresponding head enters the field in grey.

From the example shown above, we can identify the **booster set** that satisfies the request. The model is pump 50-200/110 providing a head of 38,6 m.

## GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION - POSITIVE SUCTION HEAD INSTALLATION

EN12845 recommends always installing pumps in suction lift conditions, where possible. If this is not possible, the pumps can be installed in positive suction head conditions according to the following rules:

- The height of the minimum water level at the pump axis must not be greater than 3,2 m.
- A foot valve must be installed in the lowest point of the suction piping.
- If more than one pump is installed, the suction piping must not be interconnected.

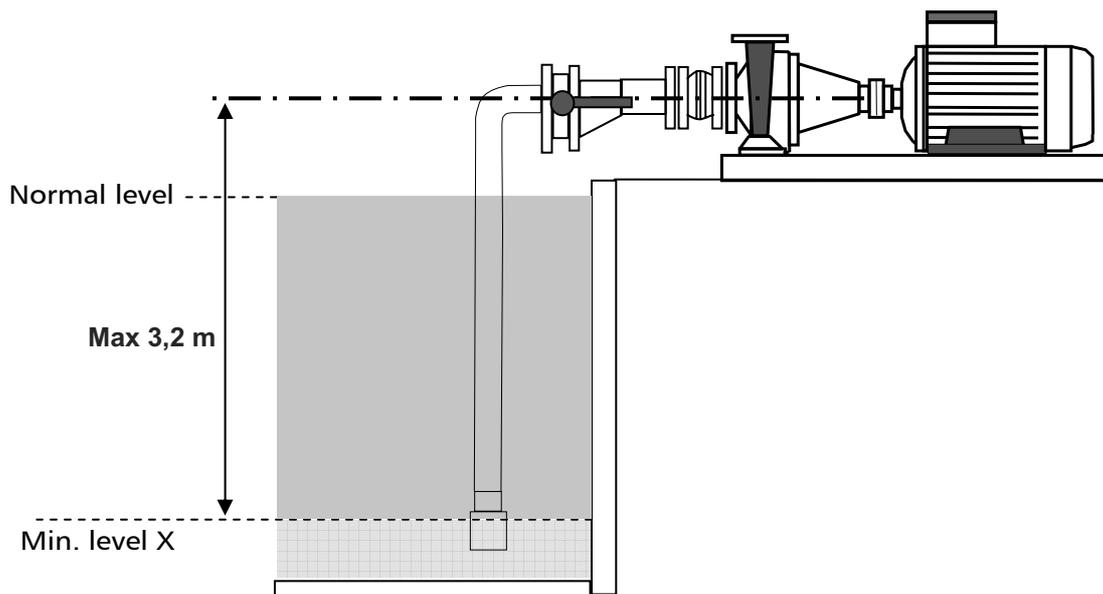

Fig. 1 positive suction head installation diagram

In accordance with EN 12845 (10.6.2.1), the suction piping, including all the valves and unions, must be designed to ensure that the NPSH available at the pump inlet exceeds the required NPSH by at least 1 m at the maximum required flow rate.

$$\text{NPSHd} \geq \text{NPSHr} + 1$$

When selecting the type of pump to use for the boosters sets, the installation conditions must be considered as these determine different pump performance levels.

An example of how to choose and check of the installation conditions is shown below:

considering the precalculation method, a suitable risk class for the system is identified, e.g.: OH3. For this risk class, the rated flow is 1100 l/min ( $Q_n$ ), while the maximum requested flow is 1350 l/min ( $Q_m$ ). Being in a positive suction head condition, the most difficult situation is considered, i.e.: the maximum difference in water level of 3,2 m, as indicated in the standard.

Being aware of the rated flow 1100 l/min and the pressure required for the system (e.g.: 35 m), the pump is selected according to the tables on page 44-45, making sure the performance rating lies inside the area shown in grey. The pump that satisfies the required work point is FHF50-200/110.

## **GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION - POSITIVE SUCTION HEAD INSTALLATION**

At this point, the installation conditions (positive suction head) must be checked at the **maximum required flow**.

The following values are replaced in the known relation,  $NPSH_d \geq NPSH_r + 1$ :

$NPSH_r$  can be deduced from the table on page 45 which in this case is 4,6 m at the maximum requested flow. After replacing the value, the following will be true (water temperature around 15°C):

$$NPSH_d = 10,33 + (-3,2) - \Sigma H_{ct}$$

Where

10,33 atmospheric pressure

3,2 geodetic difference in level

$\Sigma H_{ct}$  suction pressure drop ((valves, pipes, elbows..))

The value of  $\Sigma H_{ct}$  considers the pressure drops of the suction kit, inclusive of vibration-proof joint, reduction cone and on-off valve ( $H_c$ ), as well as the pressure drops relative to all the suction piping, foot valve, elbows, elbows, etc...

The value of  $H_c$  at the maximum required flow of the selected pump can be found in the diagram on page 81. This value is 0,16 m.

After entering it in the formula, we will have:

$$\Sigma H_{ct} = 0,16 + X$$

Where X is the pressure drop relative to all the suction piping

Hence

$NPSH_d \geq NPSH_r + 1$ . After replacing this, we will have:

$$10,33 + (-3,2) - \Sigma H_{ct} = 4,6 + 1$$

$$10,33 + (-3,2) - 0,16 - X = 4,6 + 1 \text{ which gives}$$

$$X = 1,37 \text{ m}$$

Maximum value of total drops to consider on the inlet piping in order to respect the conditions of the standard. Of course, this case was deliberately put in the worst suction conditions. The designer must check and set the values in an attempt to optimise suction conditions.

## **GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION - POSITIVE SUCTION HEAD INSTALLATION**

### **Checking performance of the set at rated flow.**

The performance of the booster set must now be checked in the installation conditions of the example used up until now.

Work point:  $Q_n: 1100 \text{ l/min}$   $H = 35 \text{ m}$   
The selected pump is FHF50-200/110

Starting from the usual relation given by the standard, we will have:

$$NPSH_d \geq NPSH_r + 1$$

$$NPSH_d = 10,33 + (-3,2) - \sum H_{ct}$$

$NPSH_r$  can be deduced from the table on page 45 which in this case is 2,9 m **at the rated flow**.

The value of  $\sum H_{ct}$  considers the pressure drops of the suction kit, inclusive of vibration-proof joint, reduction cone and on-off valve ( $H_c$ ), as well as the pressure drops relative to all the suction piping, foot valve, elbows, elbows, etc...

The value of  $H_c$  at the rated required flow of the selected pump can be found in the diagram on page 81. This value is 0,12 m.

After entering it in the formula, we will have:

$$\sum H_{ct} = 0,12 + X$$

Where X is the pressure drop relative to all the suction piping

Hence

$NPSH_d \geq NPSH_r + 1$ . After replacing this, we will have:

$$10,33 + (-3,2) - \sum H_{ct} = 2,9 + 1$$

$$10,33 + (-3,2) - 0,12 - X = 2,9 + 1 \text{ which gives}$$

$$X = 3,11 \text{ m}$$

Value of the total drops to consider on the suction piping

Taking the pressure value of the selected set, the value corresponds to 38,6 m at the rated flow.

Therefore, the verification of the pressure values in the above suction conditions becomes:

$$H = 38,6 - 0,12 - 3,11 = \mathbf{35,4 \text{ m}} > \mathbf{35 \text{ m}}$$
 which is the pressure required for the system

The result satisfies the performance required for the system in the installation conditions of the example.

## GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION - SUCTION LIFT INSTALLATION

### Suction lift installation

EN12845 recommends always installing pumps in suction lift conditions, where possible, according to the following rules:

- At least two thirds of the effective capacity of the suction tank must be above the level of the pump axis.
- The pump axis must not be more than 2 m above the minimum water level in the suction tank.

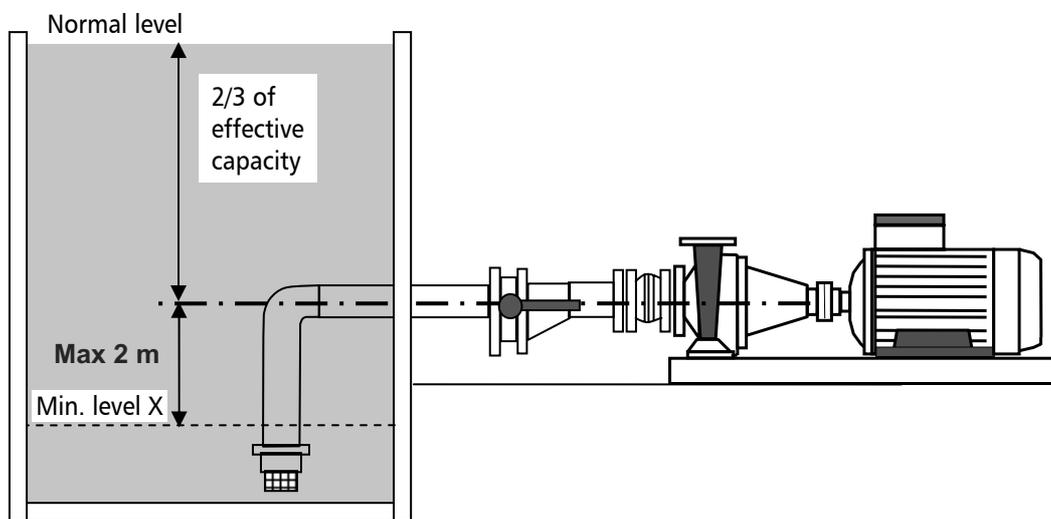

Fig. 2 suction lift installation diagram

In accordance with EN 12845 (10.6.2.1), the suction piping, including all the valves and unions, must be designed to ensure that the NPSH available at the pump inlet exceeds the required NPSH by at least 1 m at the maximum required flow rate.

$$\text{NPSHd} \geq \text{NPSHr} + 1$$

When selecting the type of pump to use for the boosters sets, the installation conditions must be considered as these determine different pump performance levels.

An example of how to choose and check of the installation conditions is shown below:

considering the precalculation method, a suitable risk class for the system is identified, e.g.: OH3. For this risk class, the rated flow is 1100 l/min ( $Q_n$ ), while the maximum requested flow is 1350 l/min ( $Q_m$ ). Being in the suction lift condition, a neutral situation is used in order to consider the water level on the same horizontal plane as the pump, without benefiting from any positive suction head.

## **GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION - SUCTION LIFT INSTALLATION**

Being aware of the rated flow 1100 l/min and the pressure required for the system (e.g.: 35 m), the pump is selected according to the tables on page 44-45, making sure the performance rating lies inside the area shown in grey. The pump that satisfies the required work point is FHF50-200/110.

At this point, the installation conditions (suction lift) must be checked at the maximum required flow.

The following values are replaced in the known relation,  $NPSH_d \geq NPSH_r + 1$ :

$NPSH_r$  can be deduced from the table on page 45 which in this case is 4,6 m at the maximum requested flow.

After replacing the value, the following will be true (water temperature around 15°C):

$$NPSH_d = 10,33 + (0) - \Sigma H_{ct}$$

Where

10,33 atmospheric pressure

0 geodetic difference in level

$\Sigma H_{ct}$  suction pressure drop (valves, pipes, elbows...)

The value of  $\Sigma H_{ct}$  considers the pressure drops of the suction kit, inclusive of vibration-proof joint, reduction cone and on-off valve ( $H_c$ ), as well as the pressure drops relative to all the suction piping, foot valve, elbows, etc...

The value of  $H_c$  at the maximum required flow of the selected pump can be found in the diagram on page 87.

This value is 0,32 m.

After entering it in the formula, we will have:

$$\Sigma H_{ct} = 0,32 + X$$

Where X is the pressure drop relative to all the suction piping

Hence

$NPSH_d \geq NPSH_r + 1$ . After replacing this, we will have:

$$10,33 + (0) - \Sigma H_{ct} = 4,6 + 1$$

$$10,33 + (0) - 0,32 - X = 4,6 + 1 \quad \text{which gives}$$

$$X = 4,41 \text{ m}$$

Maximum value of total drops to consider on the inlet piping in order to respect the conditions of the standard. Of course, the case in point was deliberately tested in neutral suction conditions that neither benefit nor optimise suction.

The designer must check and set the values in an attempt to make suction conditions as efficient as possible.

## **GEN SERIES OF BOOSTER SETS CHOICE AND SELECTION - SUCTION LIFT INSTALLATION**

### **Checking performance of the selected set at rated flow.**

The performance of the booster set must now be checked in the installation conditions of the example used up until now.

Work point:  $Q_n$  1100 l/min  $H = 35$  m  
The selected pump is FHF50-200/110

Starting from the usual relation given by the standard, we will have:

$$NPSH_d \geq NPSH_r + 1$$

$$NPSH_d = 10,33 + (0) - \sum H_{ct}$$

$NPSH_r$  can be deduced from the table on page 45 which in this case is 2,9 m **at the rated flow**.

The value of  $\sum H_{ct}$  considers the pressure drops of the suction kit, inclusive of vibration-proof joint, reduction cone and on-off valve ( $H_c$ ), as well as the pressure drops relative to all the suction piping, foot valve, elbows, etc...

The value of  $H_c$  at the rated required flow of the selected pump can be found in the diagram on page 87. This value is 0,22 m.

After entering it in the formula, we will have:

$$\sum H_{ct} = 0,22 + X$$

Where  $X$  is the pressure drop relative to all the suction piping

Hence

$NPSH_d \geq NPSH_r + 1$ . After replacing this, we will have:

$$10,33 + (0) - \sum H_{ct} = 2,9 + 1$$

$$10,33 + (0) - 0,22 - X = 2,9 + 1 \quad \text{which gives}$$

$$X = 6,21 \text{ m}$$

Value of the total drops to consider on the suction piping

Taking the pressure value of the selected set, the value corresponds to 38,6 m at the rated flow.

Therefore, the verification of the pressure values in the above suction conditions becomes:

$$H = 38,6 - 0,22 - 6,21 = \mathbf{32,17 \text{ m} < \mathbf{35 \text{ m}}$$
 which is the pressure required for the system.

The value obtained, doesn't satisfy the performance necessary for the system, but as is evident, we have used deliberately a neutral installation condition that it doesn't give benefits to the suction. It results that installed the pump with positive suction of 3 m, we will have a pressure value of 35,17 m that it satisfied the relation.

## GEN../FHF Series

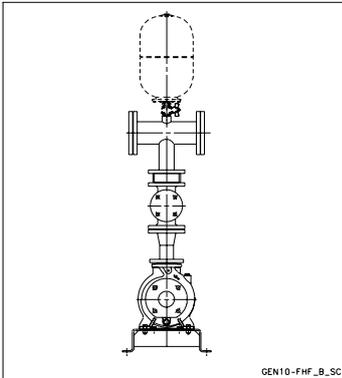

Fire-fighting booster sets EN 12845  
Horizontal Centrifugal electric pumps FHF series  
equipped with high efficiency PLM motors

**50 Hz**

**Lowara**

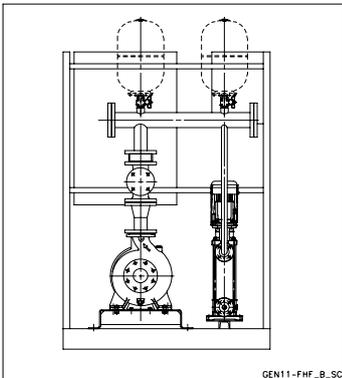

**RANGE**

**GEN./FHF RANGE**

- The range of EN 12845 series fire-fighting booster sets includes models with 1 or 2 electric service pumps and some with jockey pumps for adapting to the specific requirements of each application.

**GEN10 SERIES**

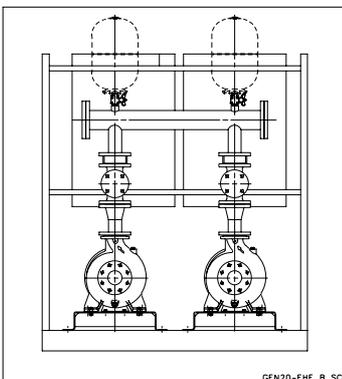

- Fire-fighting sets with a centrifugal service pump horizontal axis and body made of cast iron in the FHF series.

**Head** up to 100 m.  
**Flow** up to 650 m<sup>3</sup>/h.

**GEN11 SERIES**

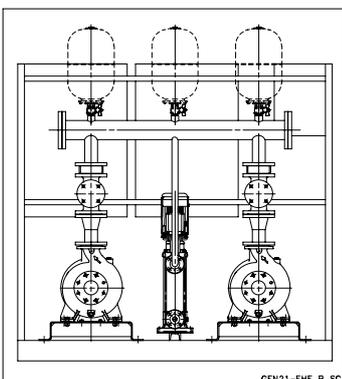

- Fire-fighting sets with a centrifugal service pump horizontal axis and body made of cast iron in the FHF series and jockey pump.

**Head** up to 100 m.  
**Flow** up to 650 m<sup>3</sup>/h.

**GEN20 SERIES**

- Fire-fighting sets with two centrifugal service pump horizontal axis and body made of cast iron in the FHF series.

**Head** up to 100 m.  
**Flow** up to 1300 m<sup>3</sup>/h.

**GEN21 SERIES**

- Fire-fighting sets with two centrifugal service pump horizontal axis and body made of cast iron in the FHF series and jockey pump.

**Head** up to 100 m.  
**Flow** up to 1300 m<sup>3</sup>/h.

**Fire-fighting  
booster sets  
EN 12845**
**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Fixed fire-fighting systems.  
Automatic Sprinkler systems.

**GEN..10/FHF  
Series**

**SPECIFICATIONS**

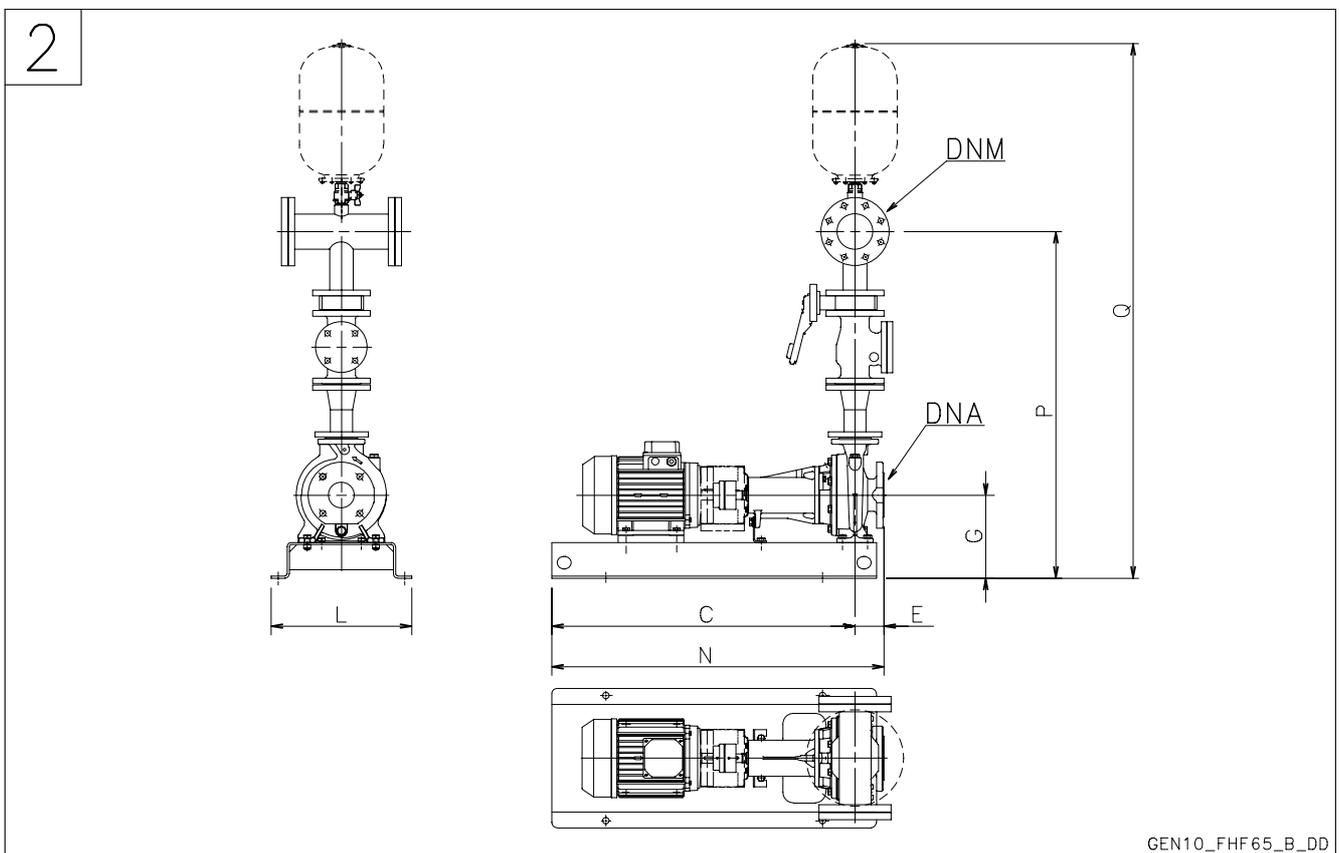

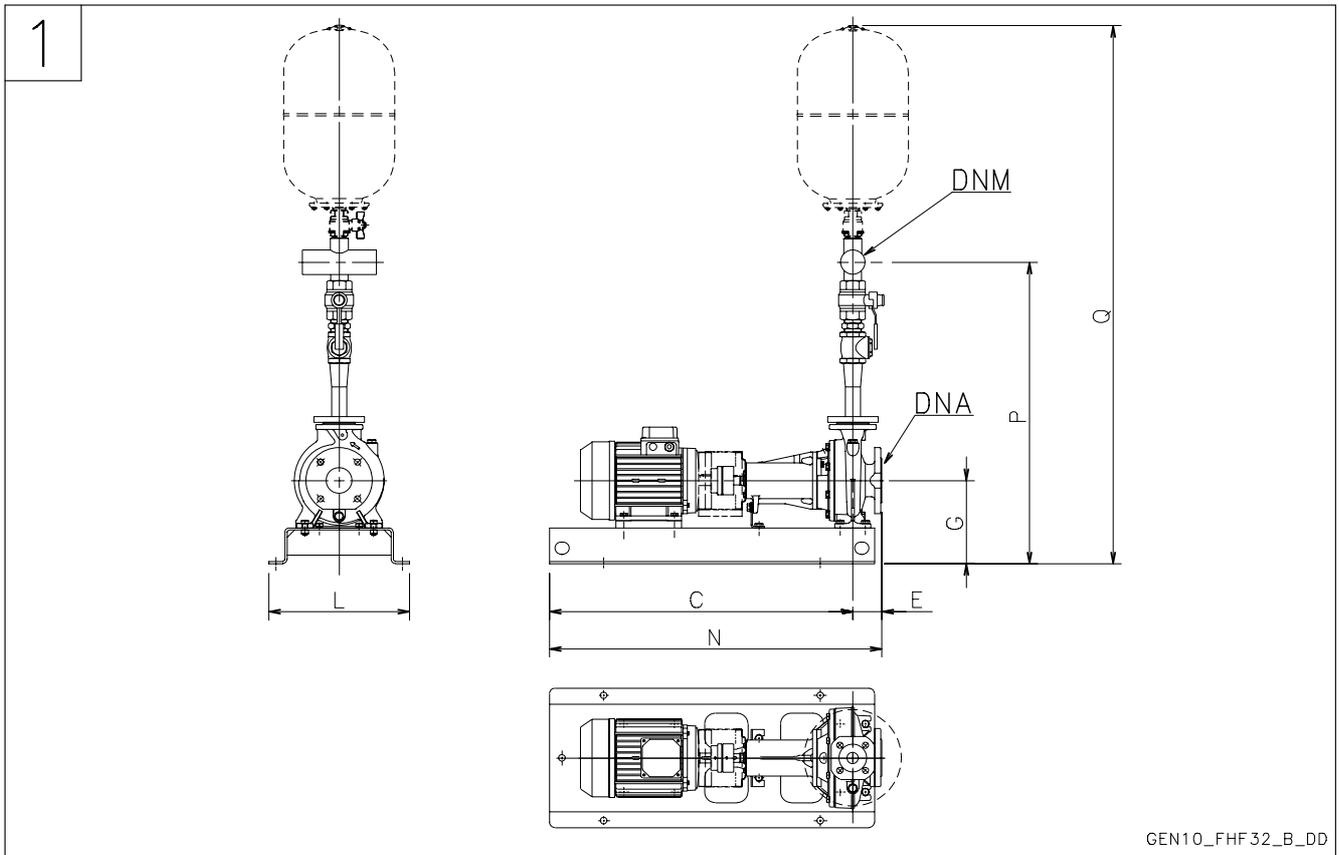

- **Flow** up to 650 m<sup>3</sup>/h.
- **Head** up to 100 m.
- Panel supply power voltage:  
3 x 400V ± 10%.
- Frequency: 50 Hz.
- Voltage for controls outside panel:  
24 Vac.
- Protection grade:  
- electric panel: IP54.
- Electric pumps maximum power  
132 kW.
- Motor start-up :
  - Direct for powers up to 22 kW  
inclusive for pump (GEND...).
  - Star/Delta for higher  
powers (GENY... set).
- **Electric service pump  
with horizontal axis:**
  - FHF Series (motor protection  
grade IP55).
- Maximum running pressure:  
12 bar.

**ITT**

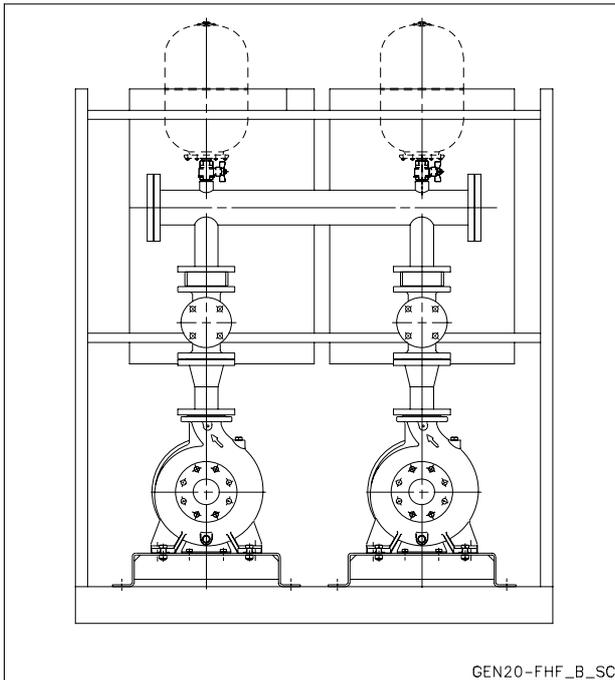

**Lowara**

**Fire-fighting  
booster sets  
EN 12845**
**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Fixed fire-fighting systems.  
Automatic Sprinkler systems.

**GEN..20/FHF  
Series**

**SPECIFICATIONS**

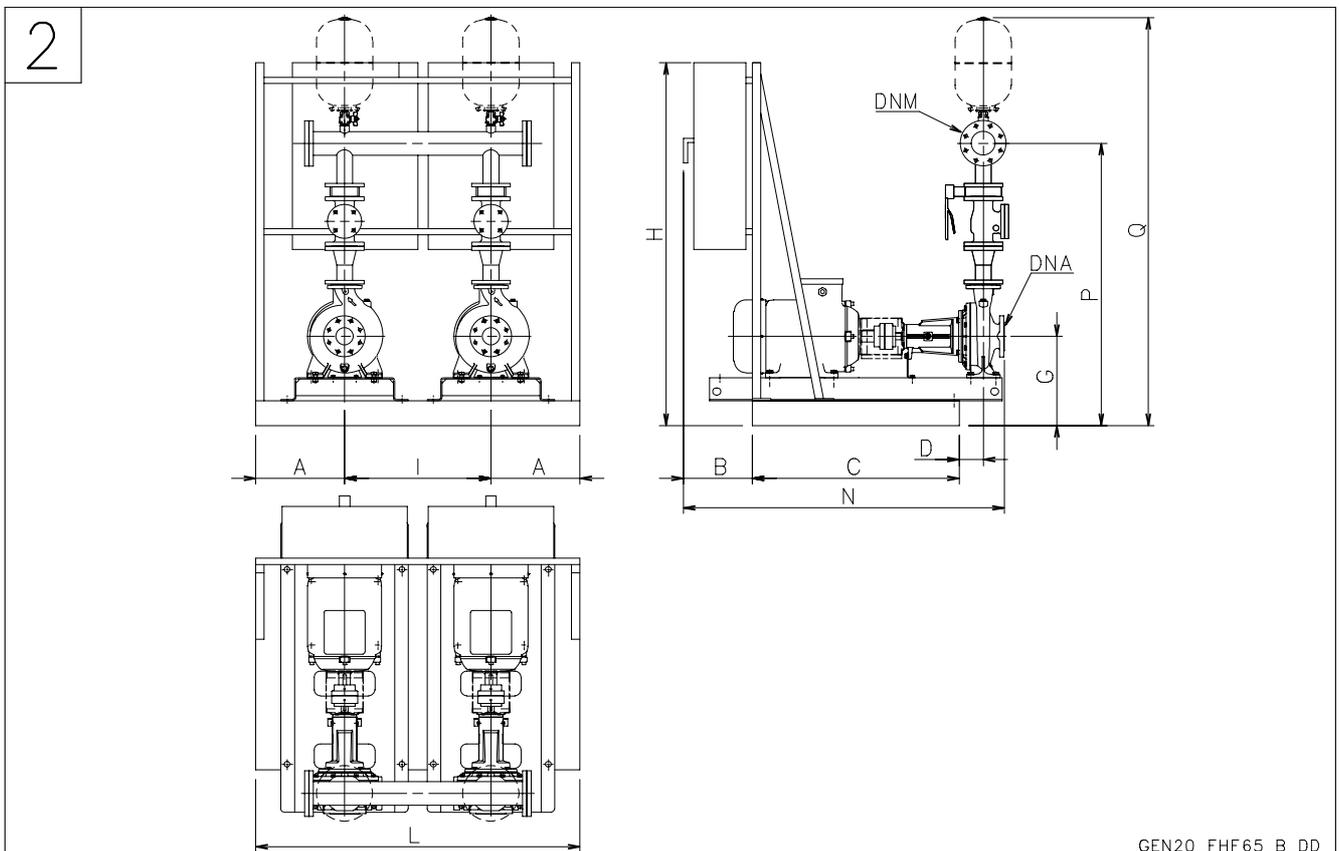

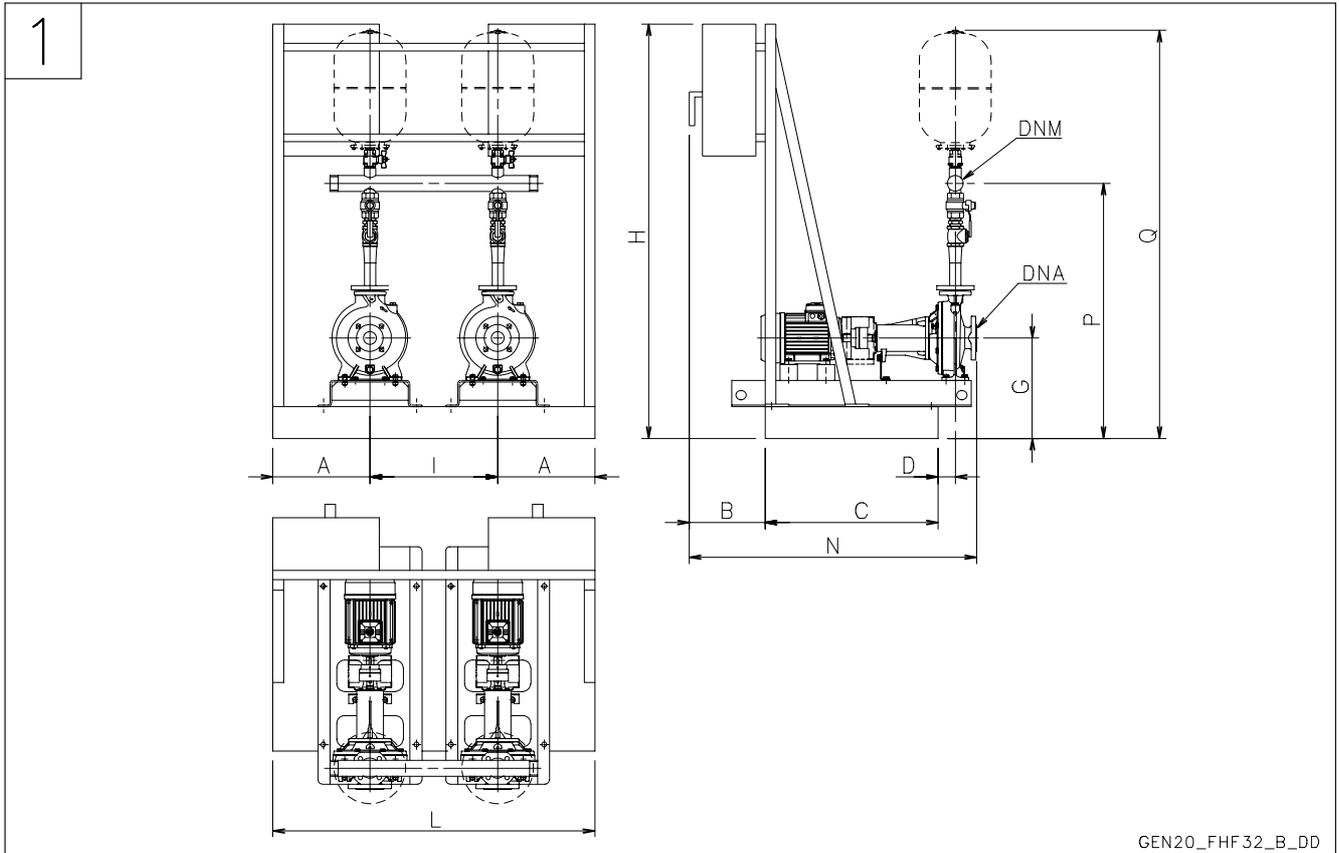

- **Flow** up to 1300 m<sup>3</sup>/h.
- **Head** up to 100 m.
- Panel supply power voltage:  
3 x 400V ± 10%.
- Frequency: 50 Hz.
- Voltage for controls outside panel:  
24 Vac.
- Protection grade:  
- electric panel: IP54.
- Electric pumps maximum power  
132 kW.
- Motor start-up :
  - Direct for powers up to 22 kW inclusive for pump (GEND...).
  - Star/Delta for higher powers (GENY... set).
- **Electric service pump with horizontal axis:**
  - FHF Series (motor protection grade IP55).
- Maximum running pressure:  
12 bar.

Dimensions in mm. Tolerance  $\pm 10$  mm.

gen20\_fhf-en\_e\_td

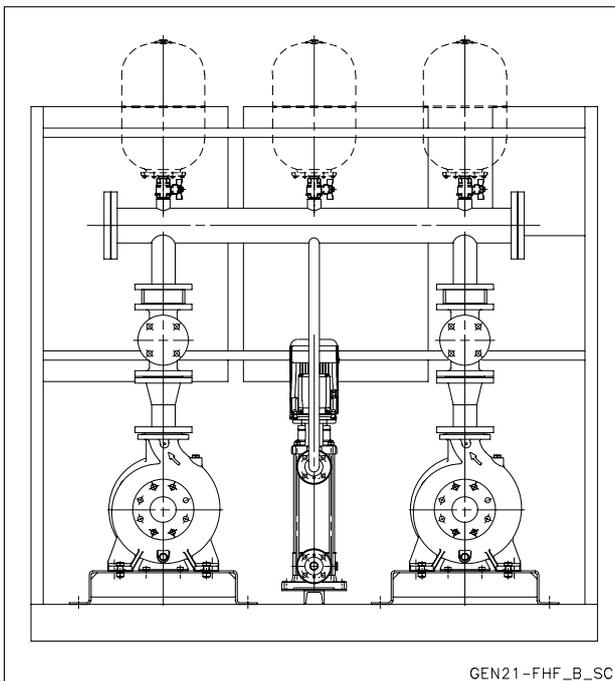

**Lowara**

**Fire-fighting  
booster sets  
EN 12845**
**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Fixed fire-fighting systems.  
Automatic Sprinkler systems.

**GEN..21/FHF  
Series**

**SPECIFICATIONS**

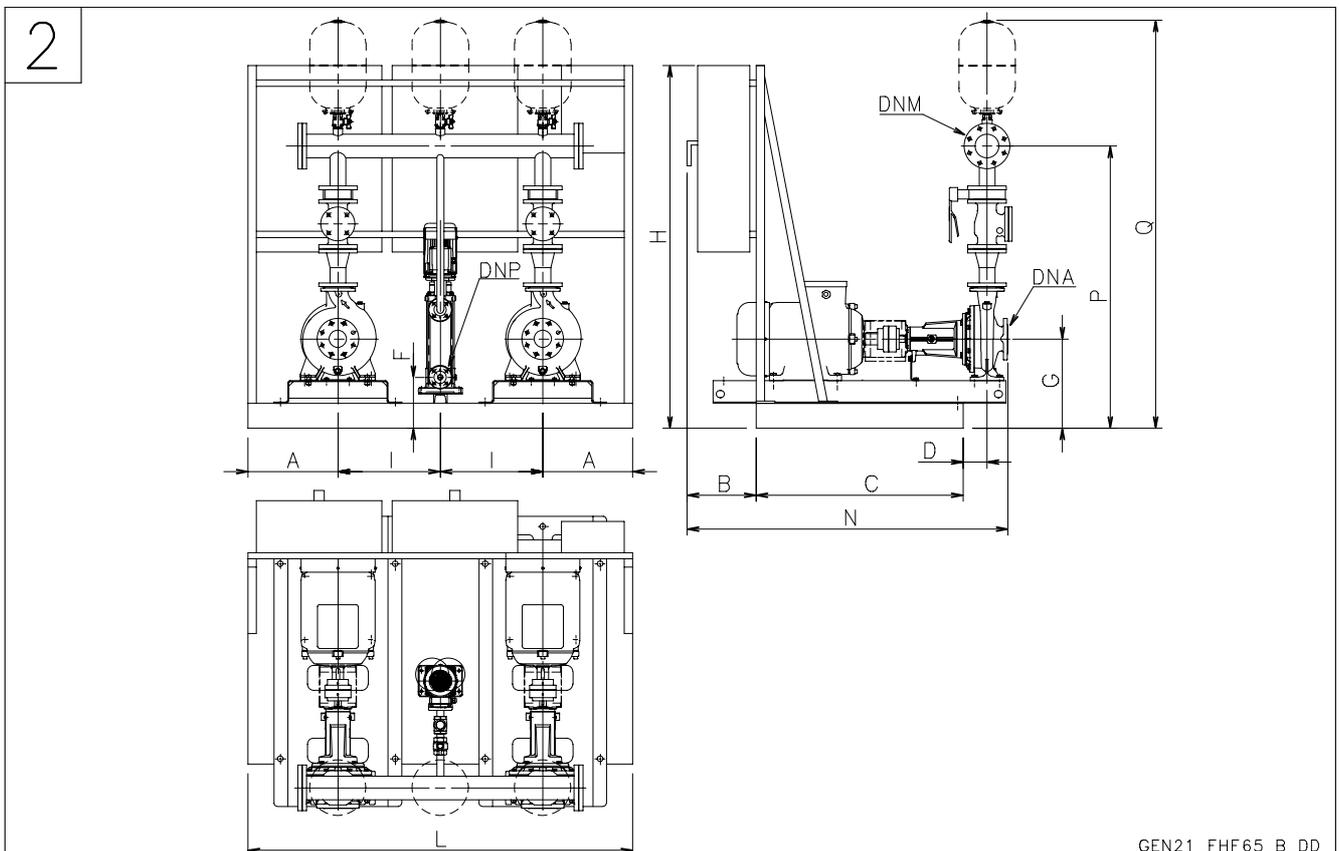

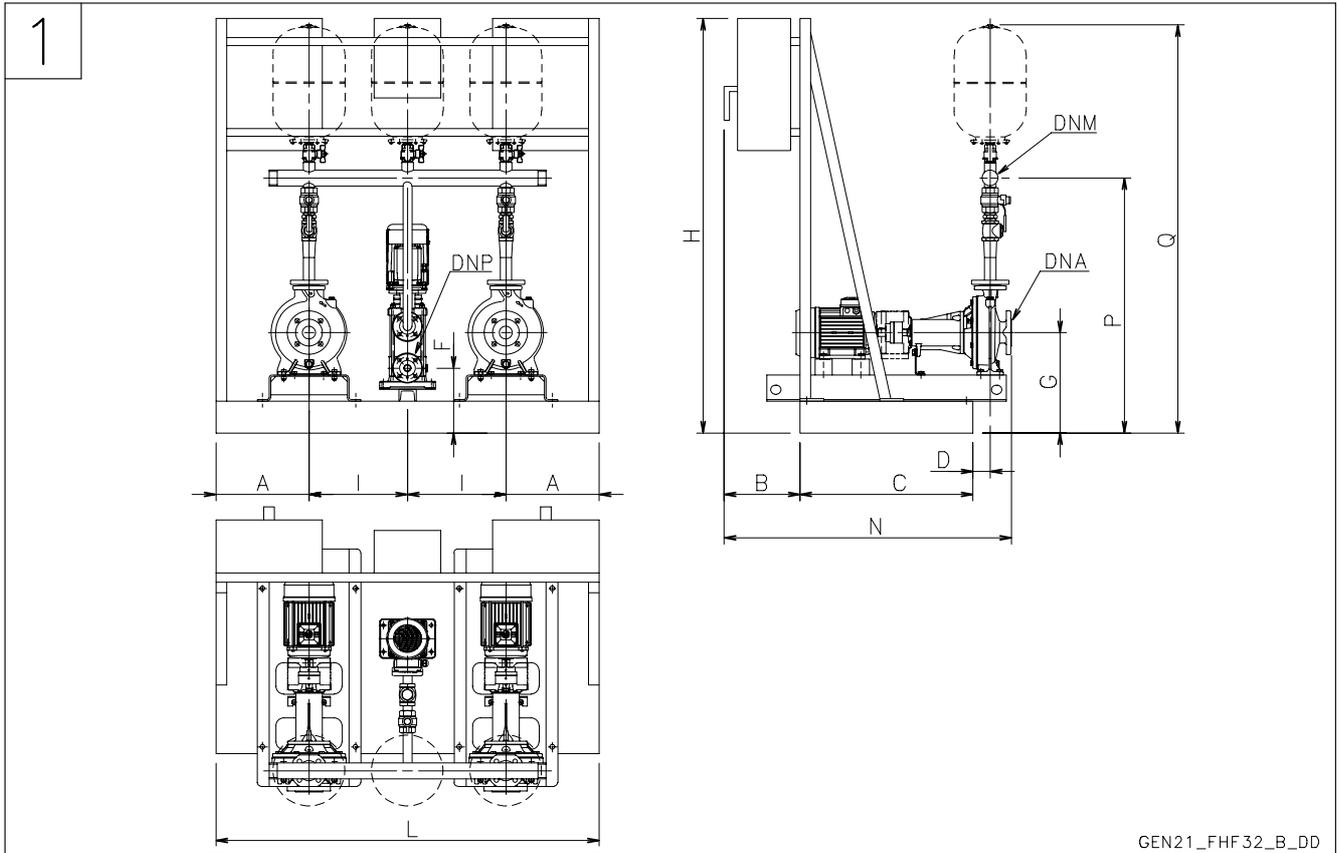

- **Flow** up to 1300 m<sup>3</sup>/h.
- **Head** up to 100 m.
- Panel supply power voltage:  
3 x 400V ± 10%.
- Frequency: 50 Hz.
- Voltage for controls outside panel:  
24 Vac.
- Protection grade:  
- electric panel: IP54.
- Electric pumps maximum power  
132 kW.
- Motor start-up :
  - Direct for powers up to 22 kW inclusive for pump (GEND...).
  - Star/Delta for higher powers (GENY... set).
- **Electric service pump with horizontal axis:**
  - FHF Series (motor protection grade IP55).
- **Electric jockey pump with vertical axis:**
  - SV Series (motor protection grade IP55).
- Maximum running pressure:  
12 bar.

## GEN../FHF SERIES OF BOOSTER SETS (POSITIVE SUCTION HEAD) H<sub>c</sub> PRESSURE DROP CURVE IN SUCTION KIT

The declared performance value are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

The NPSH<sub>r</sub> values required for the service pump were obtained in the laboratory. When using them for EN 12845 for fire-fighting systems, increase the value by 1 m.

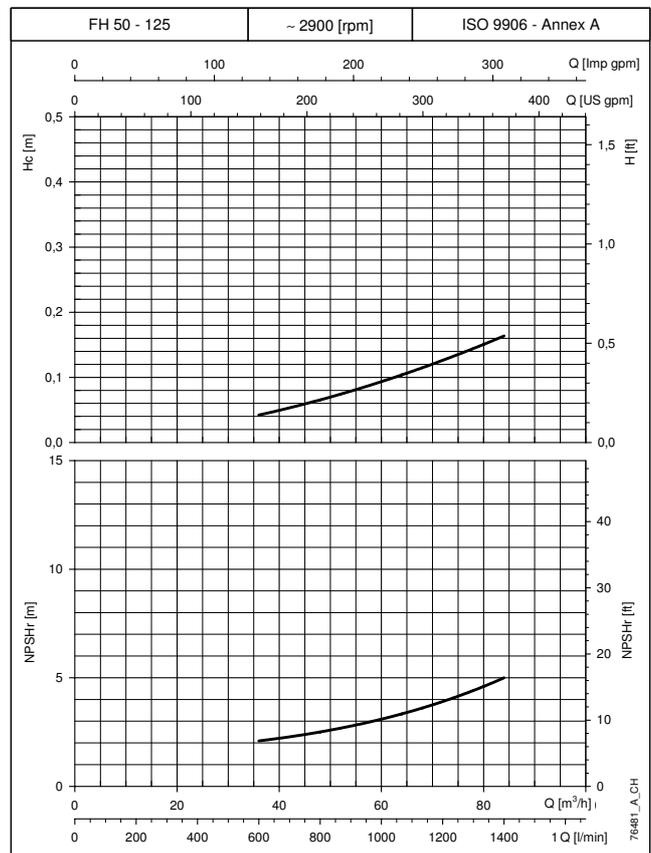

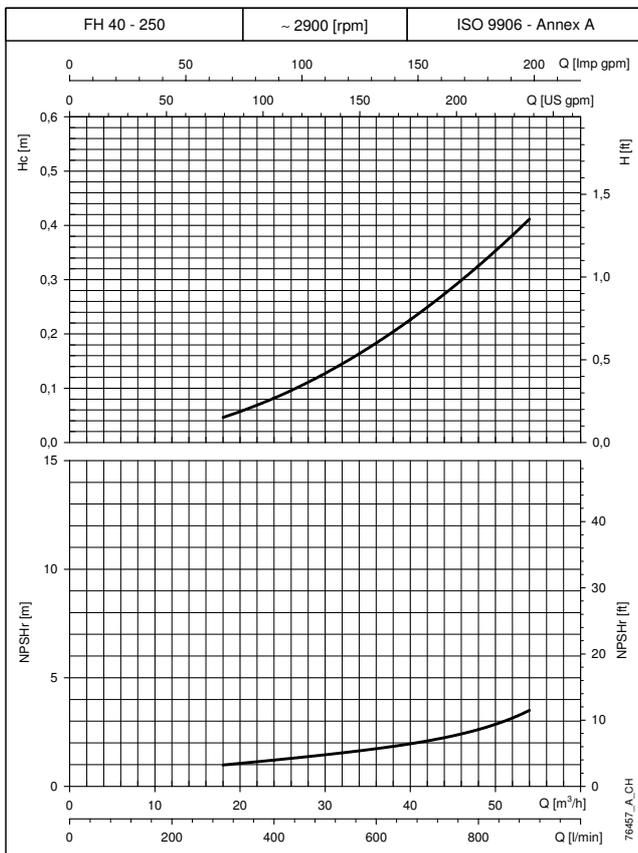

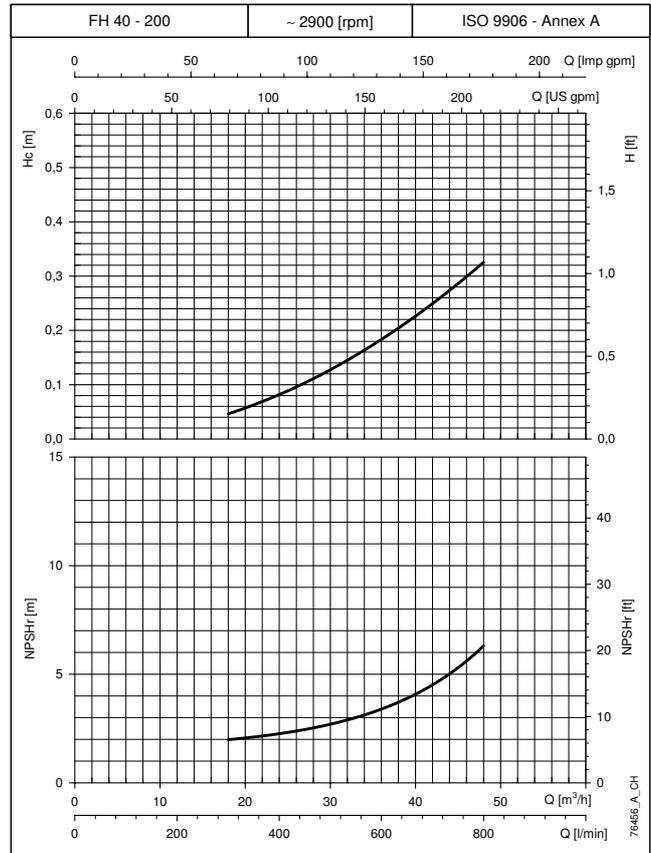

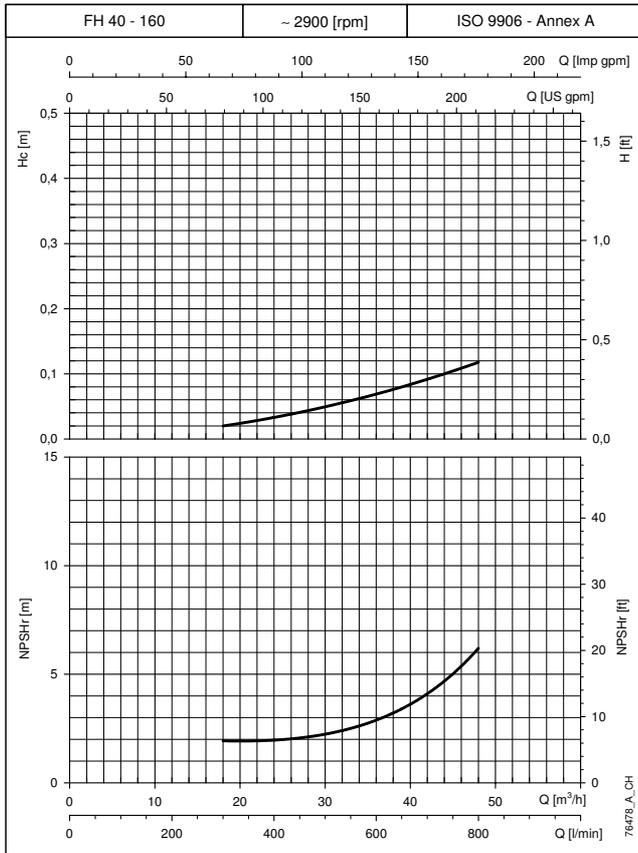

H<sub>c</sub>: Pressure drop curve in suction kit.

## GEN../SHF Series

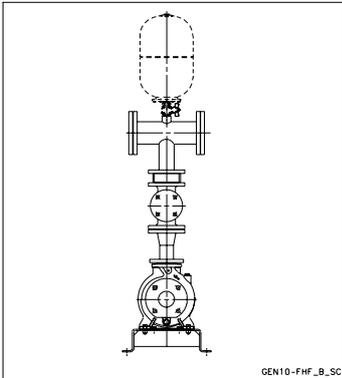

Fire-fighting booster sets EN 12845  
Horizontal Centrifugal electric pumps SHF series  
equipped with high efficiency PLM motors

**50 Hz**

**Lowara**

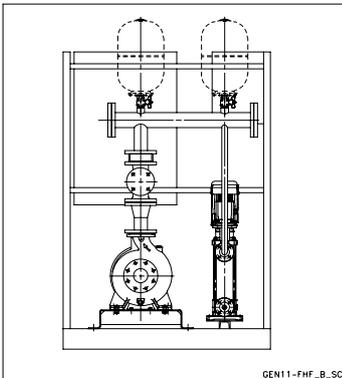

**RANGE**

**GEN./SHF RANGE**

- The range of EN 12845 series fire-fighting booster sets includes models with 1 or 2 electric service pumps and some with jockey pumps for adapting to the specific requirements of each application.

**GEN10 SERIES**

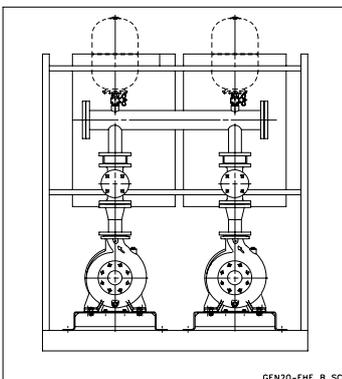

- Fire-fighting sets with a centrifugal service pump horizontal axis and body made of stainless steel in the SHF series.

**Head** up to 100 m.  
**Flow** up to 220 m<sup>3</sup>/h.

**GEN11 SERIES**

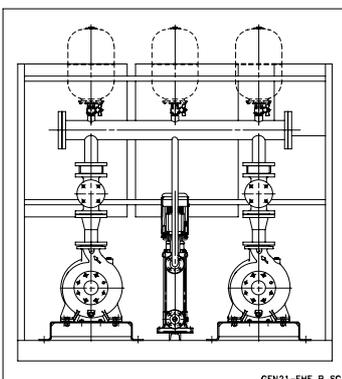

- Fire-fighting sets with a centrifugal service pump horizontal axis and body made of stainless steel in the SHF series and jockey pump.

**Head** up to 100 m.  
**Flow** up to 220 m<sup>3</sup>/h.

**GEN20 SERIES**

- Fire-fighting sets with two centrifugal service pump horizontal axis and body made of stainless steel in the SHF series.

**Head** up to 100 m.  
**Flow** up to 440 m<sup>3</sup>/h.

**GEN21 SERIES**

- Fire-fighting sets with two centrifugal service pump horizontal axis and body made of stainless steel in the SHF series and jockey pump.

**Head** up to 100 m.  
**Flow** up to 440 m<sup>3</sup>/h.

The declared NPSH values were obtained in the laboratory and refer to a single service pump

12845\_1p-shf80-2p50\_NPSHr-en\_a\_th

OHn, OHm, HHn, HHm = risk class value referred to the required rated and maximum capacity (Tab.6 para 7.3.1, Tab.7 para 7.3.2 EN12845)

Check that  $NPSHd \geq NPSHr + 1m$  is satisfied at the maximum requested capacity

The current indicated is the maximum current absorbed by the electric pumps.

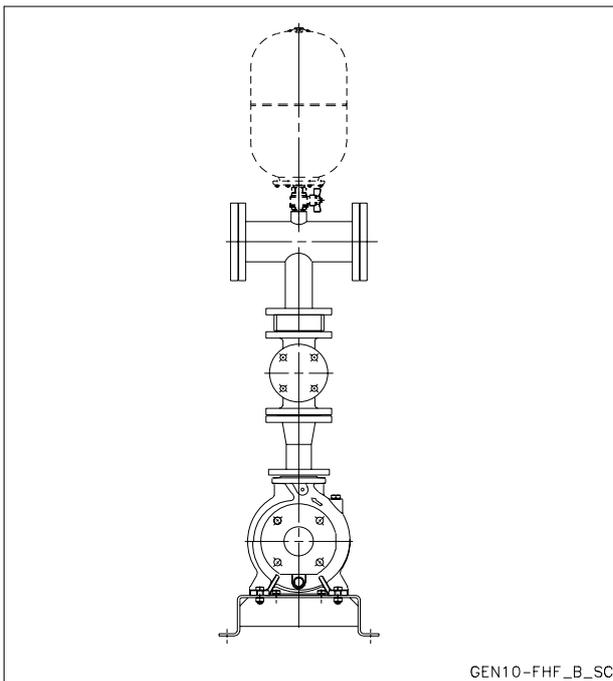

ENELP-SHF\_2p50-en\_b\_te

**Fire-fighting  
booster sets  
EN 12845**
**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Fixed fire-fighting systems.  
Automatic Sprinkler systems.

**GEN..10/SHF  
Series**

**SPECIFICATIONS**

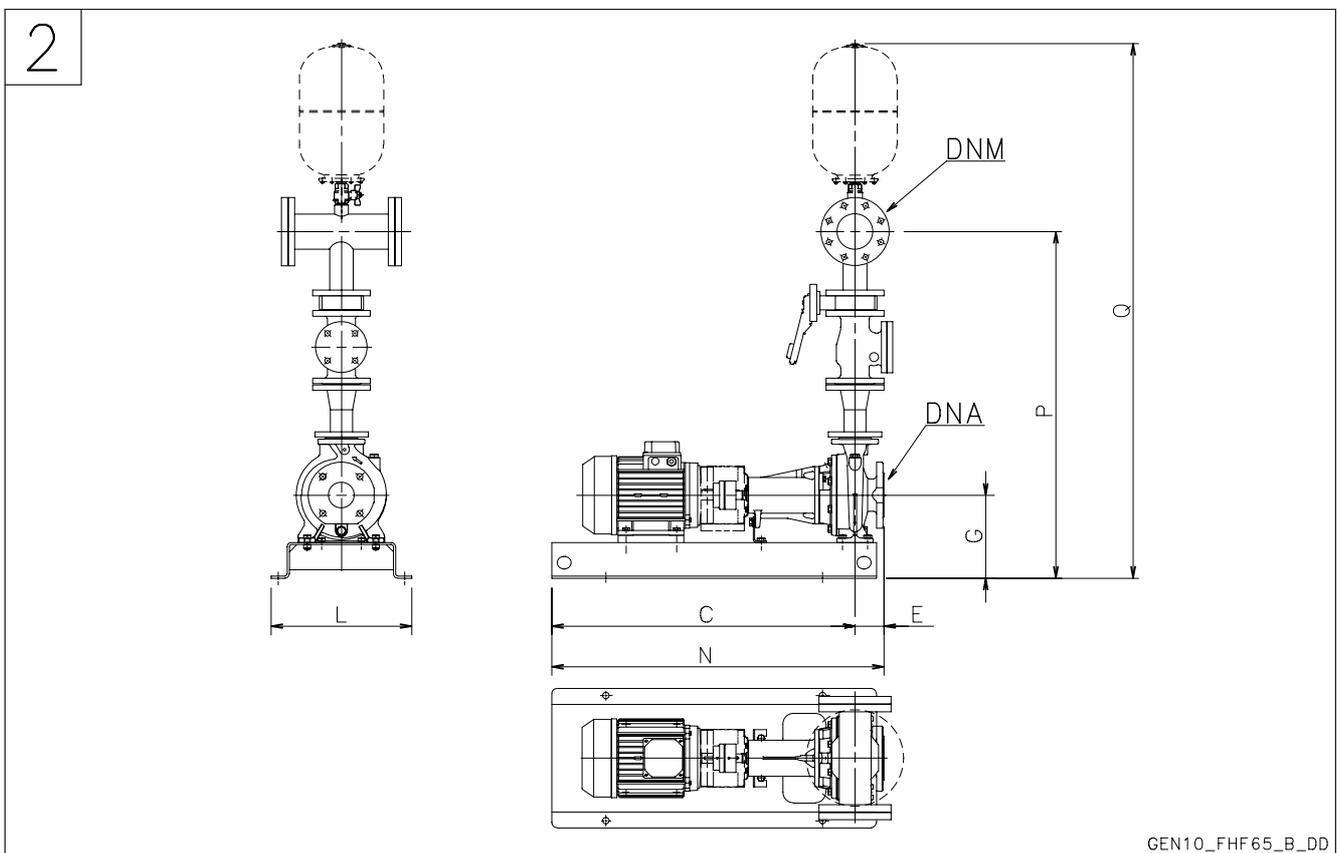

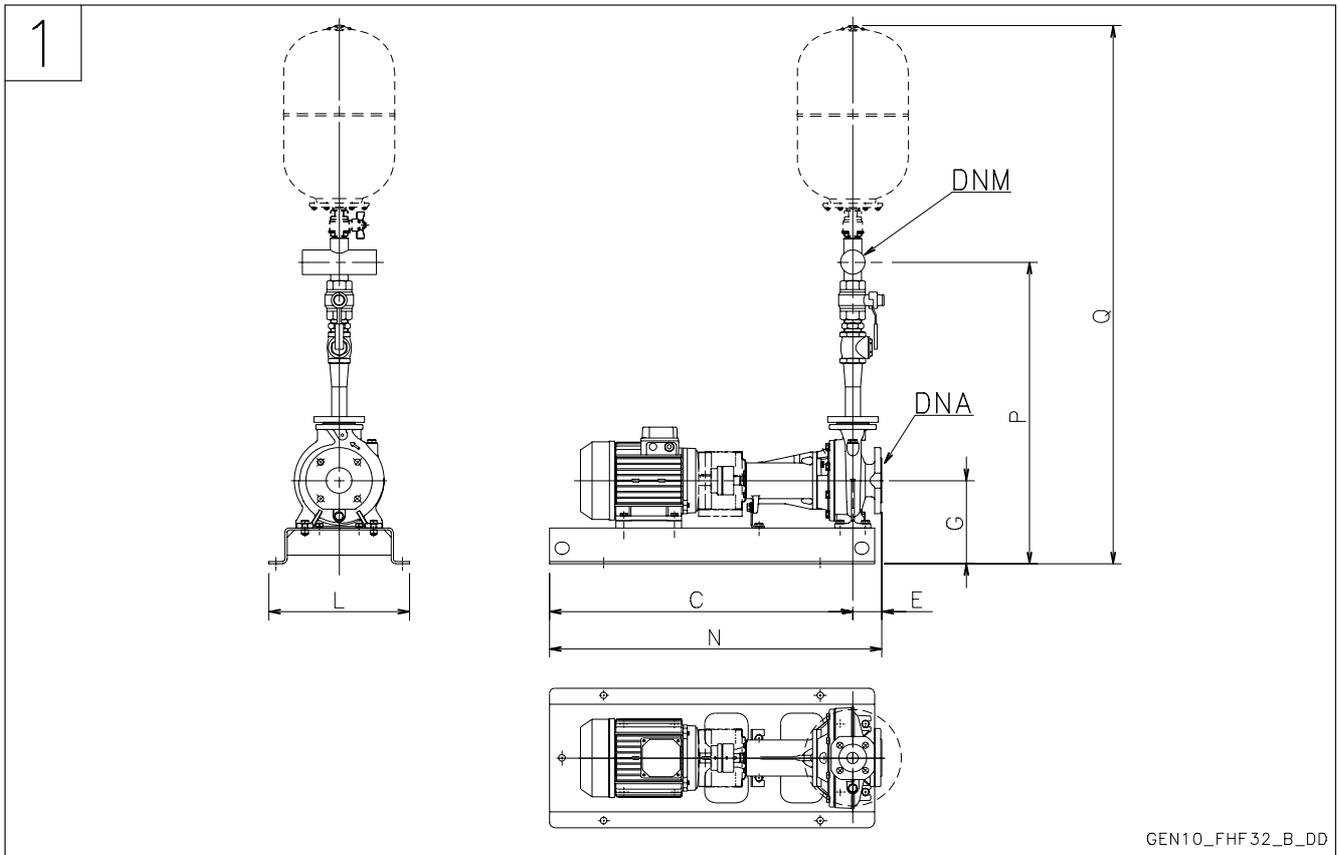

- **Flow** up to 220 m<sup>3</sup>/h.
- **Head** up to 100 m.
- Panel supply power voltage:  
3 x 400V ± 10%.
- Frequency: 50 Hz.
- Voltage for controls outside panel:  
24 Vac.
- Protection grade:  
- electric panel: IP54.
- Electric pumps maximum power  
75 kW.
- Motor start-up :
  - Direct for powers up to 22 kW inclusive for pump (GEND...).
  - Star/Delta for higher powers (GENY... set).
- **Electric service pump with horizontal axis:**
  - SHF Series (motor protection grade IP55).
- Maximum running pressure:  
12 bar.

## MARKET SECTORS

CIVIL, INDUSTRIAL

## APPLICATIONS

- Fixed fire-fighting systems.  
Automatic Sprinkler systems.

## GEN..11/SHF Series

## SPECIFICATIONS

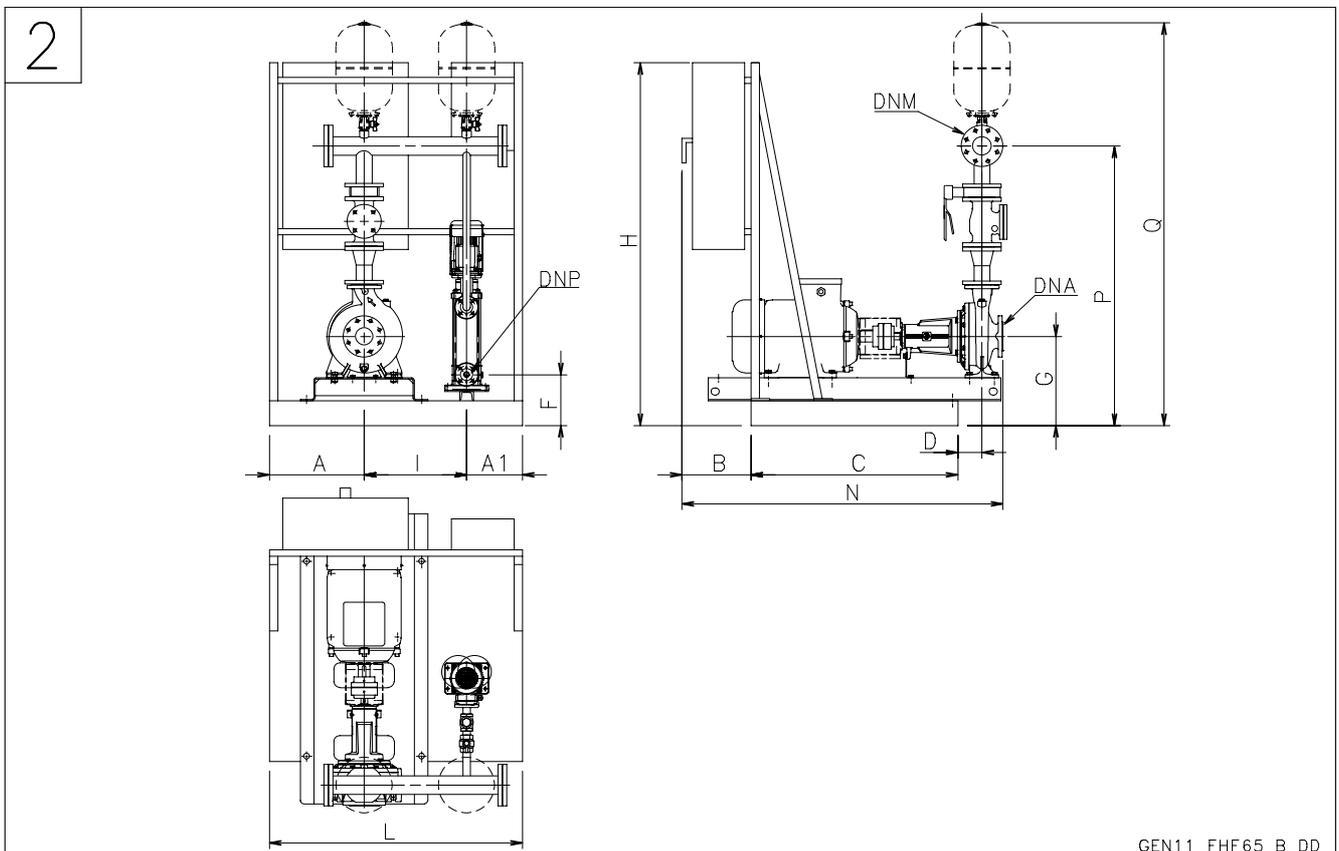

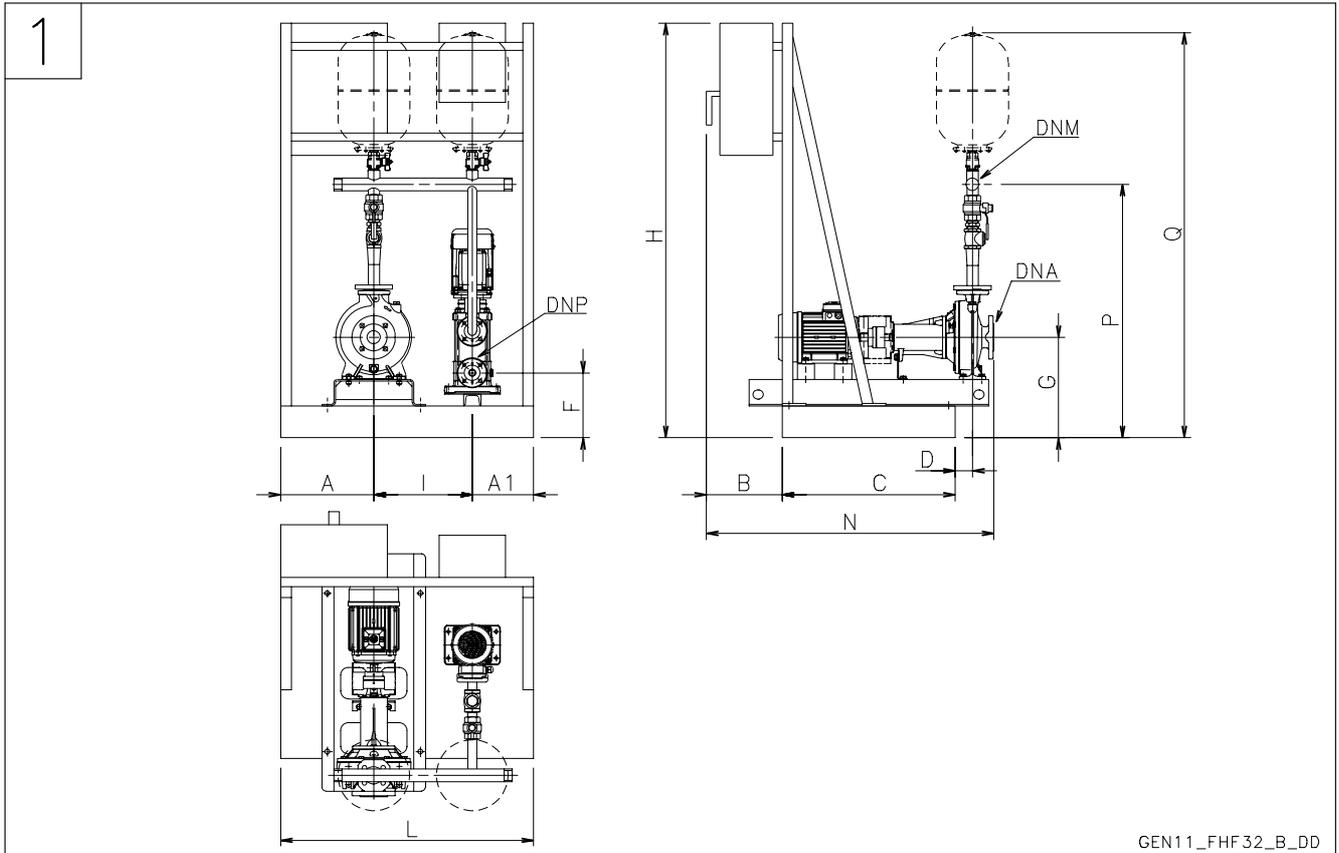

- **Flow** up to 220 m<sup>3</sup>/h.
- **Head** up to 100 m.
- Panel supply power voltage:  
3 x 400V ± 10%.
- Frequency: 50 Hz.
- Voltage for controls outside panel:  
24 Vac.
- Protection grade:  
- electric panel: IP54.
- Electric pumps maximum power  
75 kW.
- Motor start-up :
  - Direct for powers up to 22 kW inclusive for pump (GEND...).
  - Star/Delta for higher powers (GENY... set).
- **Electric service pump with horizontal axis:**
  - SHF Series (motor protection grade IP55).
- **Electric jockey pump with vertical axis:**
  - SV Series (motor protection grade IP55).
- Maximum running pressure:  
12 bar.

**ITT**

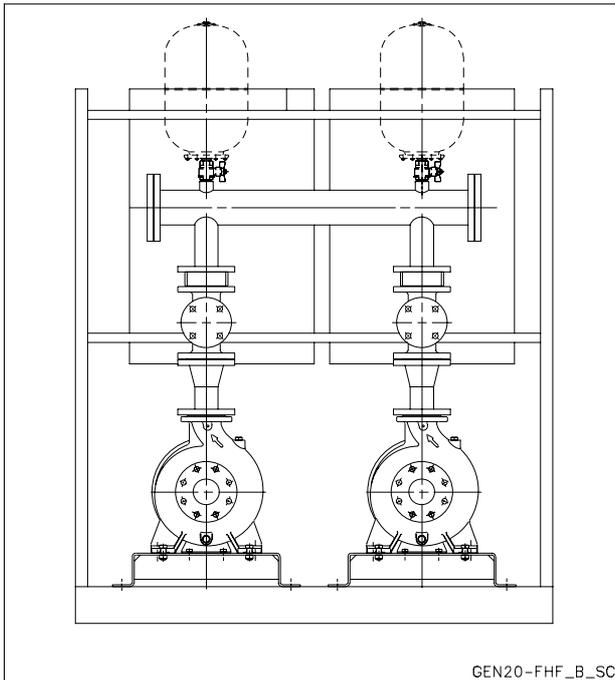

**Lowara**

**Fire-fighting  
booster sets  
EN 12845**
**MARKET SECTORS**

CIVIL, INDUSTRIAL

**APPLICATIONS**

- Fixed fire-fighting systems.  
Automatic Sprinkler systems.

**GEN..20/SHF  
Series**

**SPECIFICATIONS**

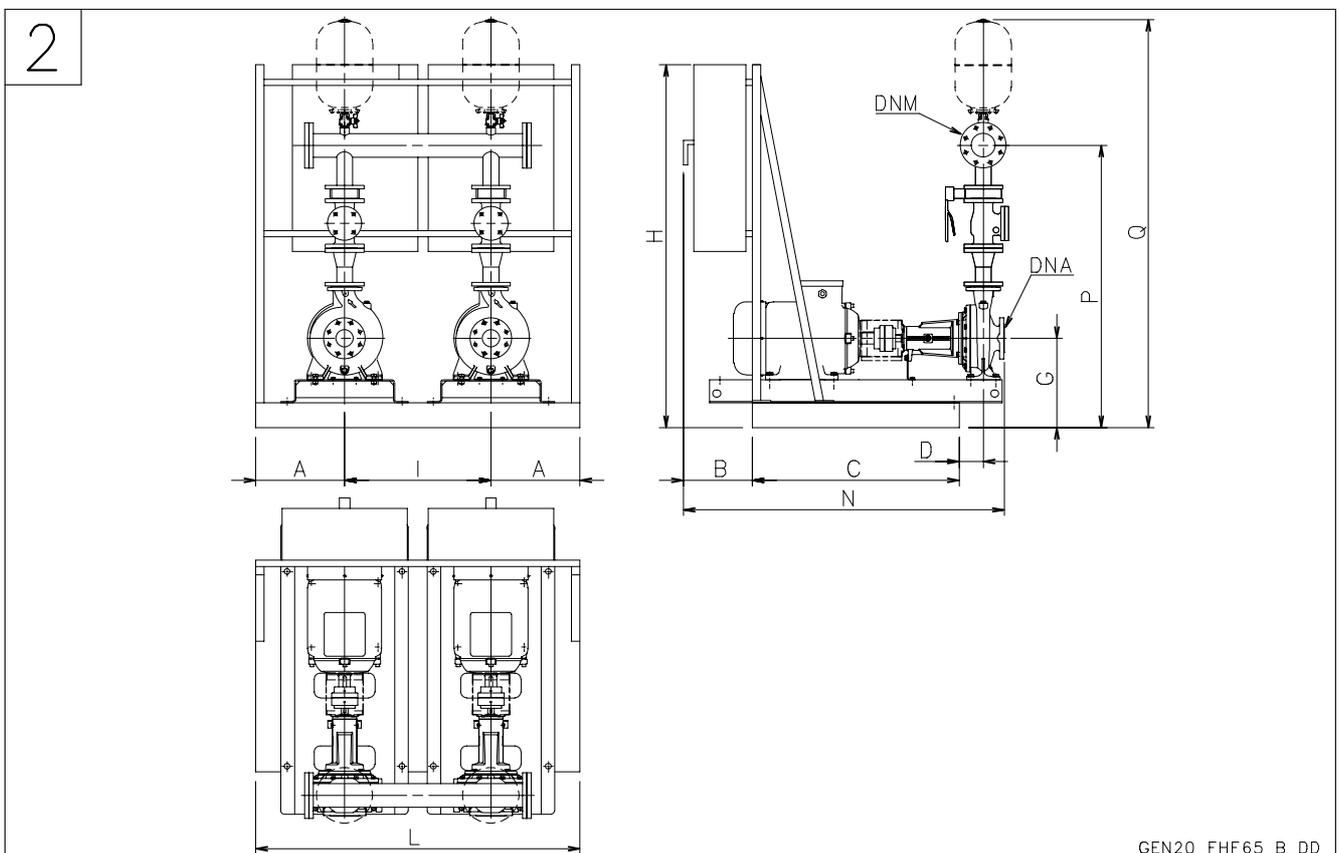

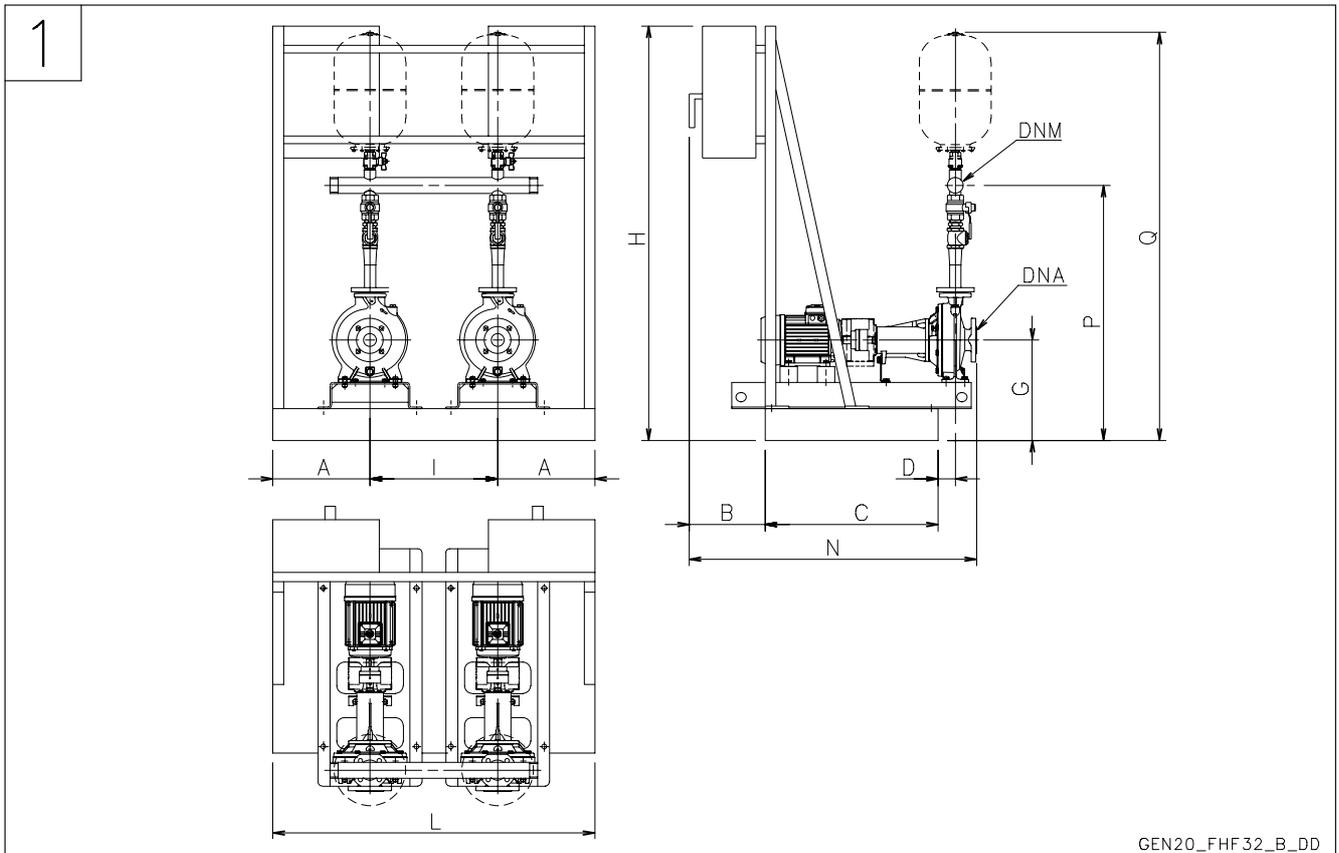

- **Flow** up to 440 m<sup>3</sup>/h.
- **Head** up to 100 m.
- Panel supply power voltage:  
3 x 400V ± 10%.
- Frequency: 50 Hz.
- Voltage for controls outside panel:  
24 Vac.
- Protection grade:  
- electric panel: IP54.
- Electric pumps maximum power  
75 kW.
- Motor start-up :
  - Direct for powers up to 22 kW inclusive for pump (GEND...).
  - Star/Delta for higher powers (GENY... set).
- **Electric service pump with horizontal axis:**
  - SHF Series (motor protection grade IP55).
- Maximum running pressure:  
12 bar.

## GEN../SHF SERIES OF BOOSTER SETS (POSITIVE SUCTION HEAD) H<sub>c</sub> PRESSURE DROP CURVE IN SUCTION KIT

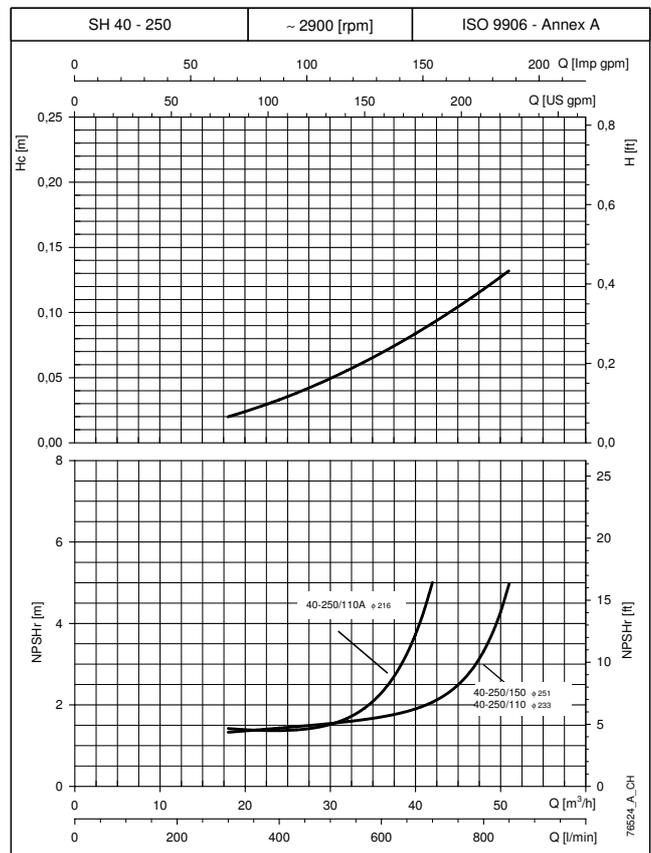

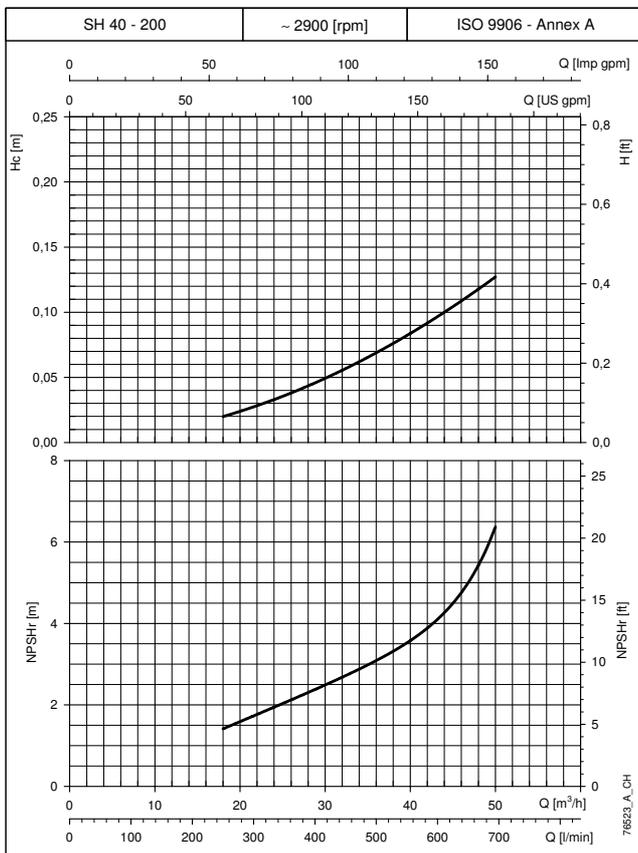

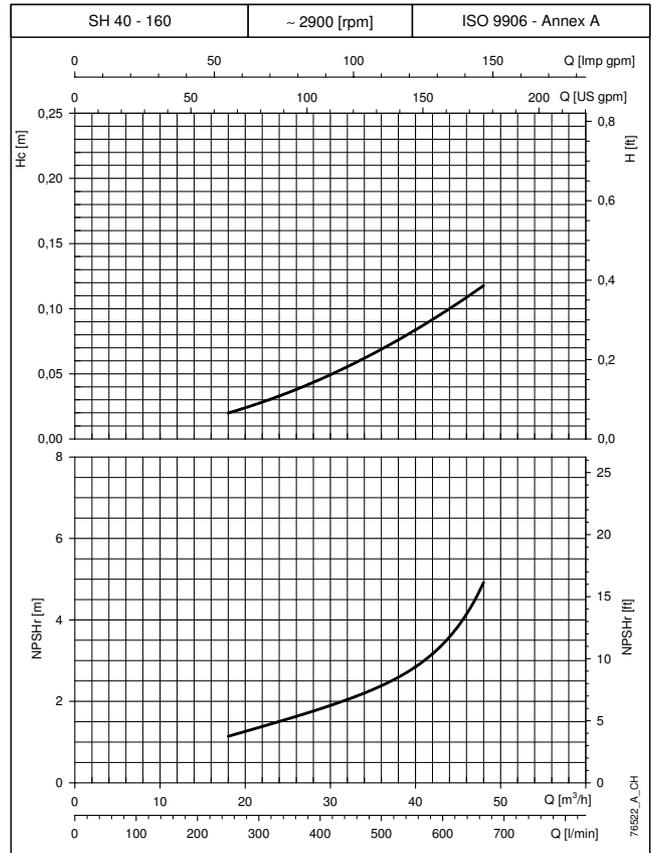

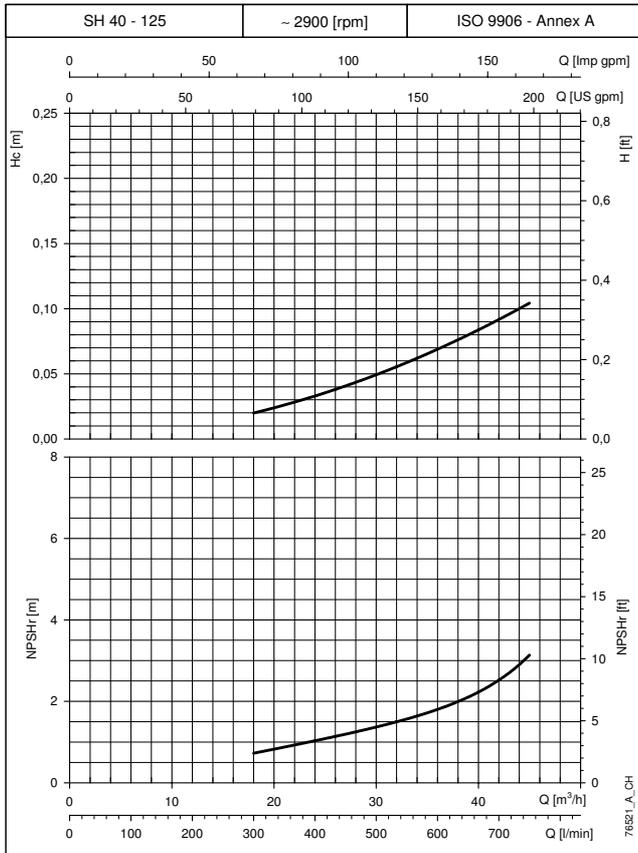

The declared performance value are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .  
 The NPSHr values required for the service pump were obtained in the laboratory. When using them for EN 12845 for fire-fighting systems, increase the value by 1 m.  
 H<sub>c</sub>: Pressure drop curve in suction kit.

## GEN./SHF SERIES OF BOOSTER SETS (POSITIVE SUCTION HEAD) H<sub>c</sub> PRESSURE DROP CURVE IN SUCTION KIT

The declared performance value are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

The NPSH<sub>r</sub> values required for the service pump were obtained in the laboratory. When using them for EN 12845 for fire-fighting systems, increase the value by 1 m.

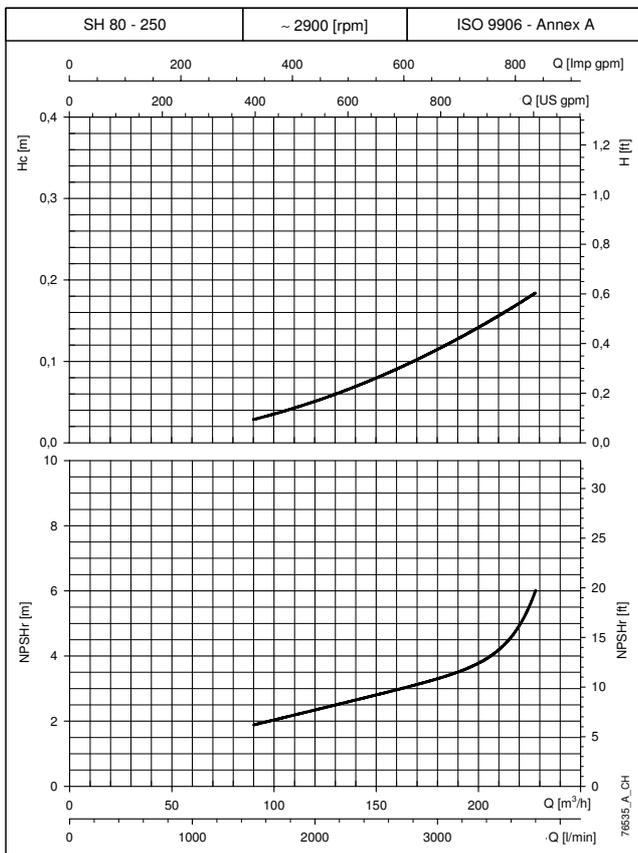

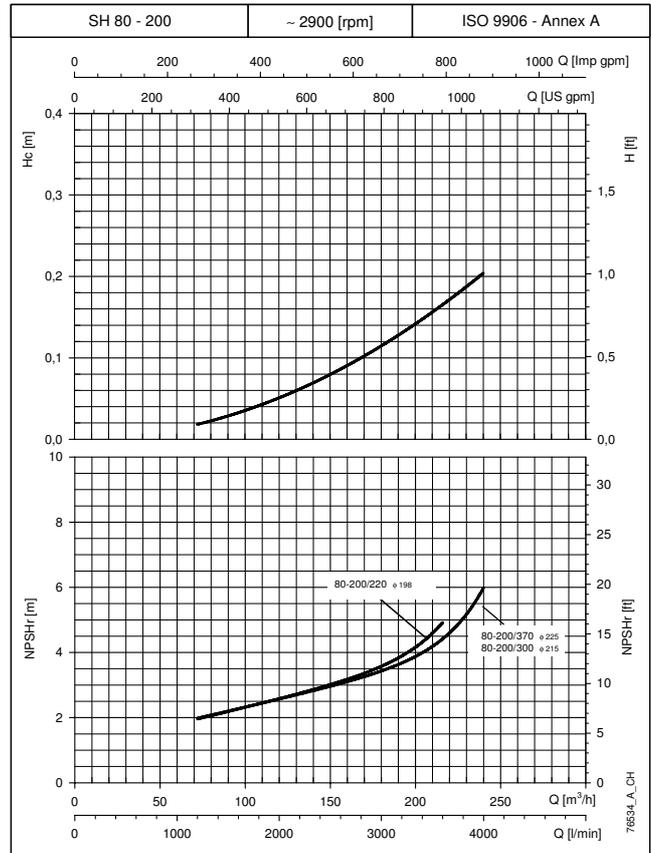

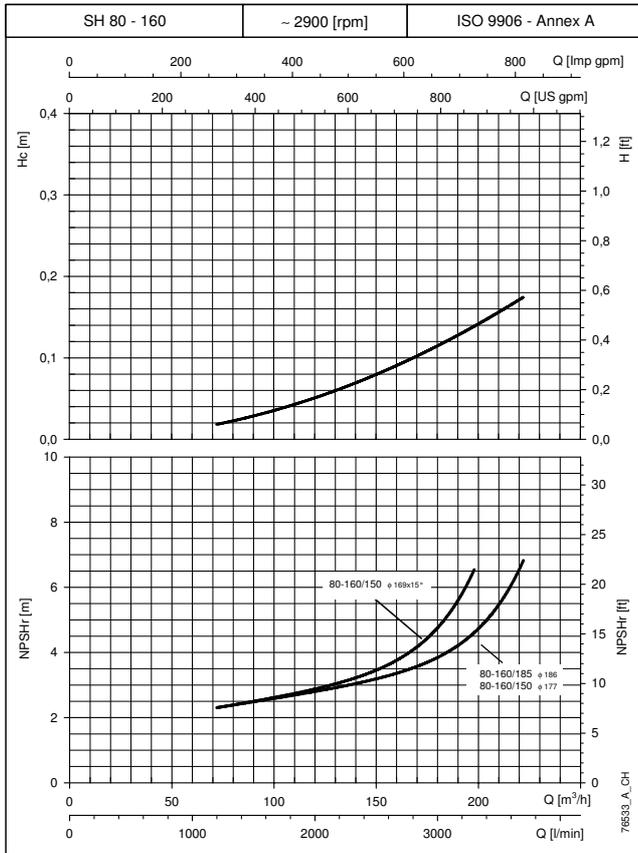

H<sub>c</sub>: Pressure drop curve in suction kit.

# **ACCESSORIES**

## DIAPHRAGM TANKS

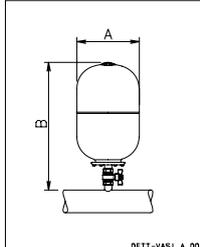

The booster sets are ready for installation, directly on the manifold, of 24-litre diaphragm tanks, one for each pump. The sets are also equipped with caps to close off the unused couplings. Larger tanks can also be connected to the unused end of the discharge manifold. For proper sizing of the tank please refer to the technical appendix.

**Kit** featuring the following accessories are **available on request**:

- diaphragm tank;
- on-off ball valve;
- operating instructions;
- packaging.

## DIAPHRAGM TANK KIT

## COUNTERFLANGE KIT

**Counterflange coupling kits** made of zinc-plated or stainless steel are available on request.

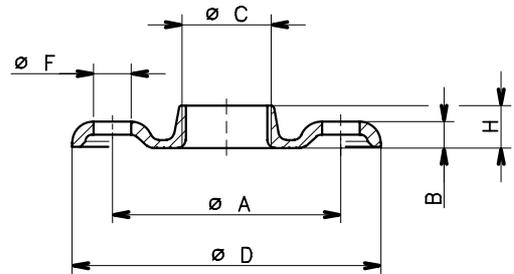

The counterflange kits are equipped with:

- N. 2 flanges.
- gasket and bolts/screws.

## **ACCESSORIES FOR BOOSTER SETS**

### **SUCTION SIDE KIT**

The EN 12845 fire-fighting booster sets are supplied without valves and stubs on the suction side of the service pump and can be completed with suitable kits that depend on legal standards.

These requirements are expressed by EN 12845 (chapter 10.5 and chapter 10.6) and are connected with the maximum speed value of the water in the pipes, their minimum section and type of installation - suction lift or positive suction head.

To provide for one suction kit for each duty pump.

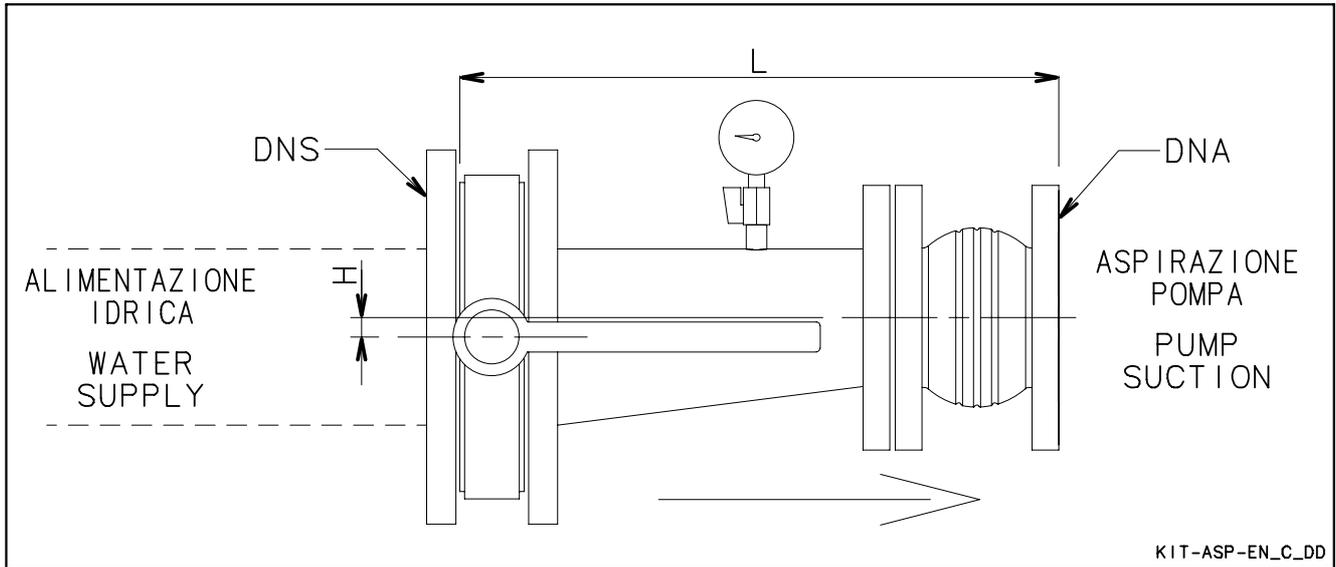

The suction side kit are equipped with:

- Anti-vibration joint to attach to the pump inlet.
- Eccentric cone or flanged stub pipe.
- Vacuum pressure gauge.
- On/off butterfly valve with lever handle for diameters up to DN100, butterfly valve with handwheel and reduction manual gear for DN125 and higher. Device for monitoring ON/OFF status included. Electrical connections by customer.  
(Valve lock kit available on request).
- Weld-on flange.

The following table summarises the pump type installed on the fire-fighting sets and the kit that corresponds to the installation type.

\* For the risk classes refer to para 6, UNI EN12845.

kit-asp-shf-en\_a\_td

- the pumps must be chosen according to the performance levels indicated in Tab. 6 para 7.3.1, Tab. 7 para 7.3.2 and the classes of risk.
- some pump models can satisfy the conditions of one or more classes of risk.
- always check the correct selection of the pump depending on the performance level of the set.

\*\* Insert the 50mm minimal thickness under the GEN10 fire-fighting booster sets only.

## ALARMS CONTROL ELECTRICAL PANEL

Electric panel for remote status and alarm monitoring of one or two Lowara pumps installed in GEN fire-fighting booster sets, according to EN12845.

In the electric service pump mode, the following conditions are visualised:

- Motor powered.
- Pump start-up request.
- Pump running
- Failure to start.

Additionally: minimum suction tank level, minimum priming tank level, on-off valve on suction and discharge side not fully open. The valves are complete with status monitor.

In the diesel engine service pump mode, the following conditions are visualised, as required by EN12845:

- Switch on diesel engine pump control panel in non-automatic position.
- Diesel engine ails to start after 6 attempts.
- Pump running
- Controller fault.

Additionally: minimum fuel or suction tank level, minimum priming tank level, on-off valve on suction and discharge side not fully open. The valves are complete with status monitor.

All the above conditions, required by EN12845, are visualised with signal LED's and buzzers. A buzzer alarm reset button and LED tester button are included.

The control unit is also fitted out to signal the following general alarms, if present:

- General alarm for incorrect electrical connection in the exchange contacts of: flow meter circuit valve, discharge pump, jockey pump status.
- Fault in electrical connection in the exchange contact relative to panel 1 (electric pump/diesel engine pump)
- Fault in electrical connection in the exchange contact relative to panel 2 (electric pump/diesel engine pump)
- Jockey pump overload (\*).
- Jockey pump running(\*).
- Discharge pump overload (\*).
- Battery voltage low.
- Communications failure with ModBus system.

All the above conditions are visualised with signal LED's and on the display. The customer may decide to enable the buzzer.

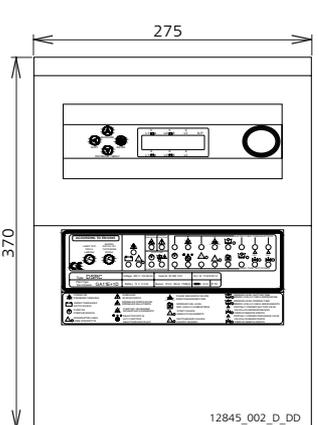

The panel comprises a plastic casing (IP55), battery, battery charger, alarms and pump status display, if connected with 485 serial communication.

Fitted to transmit alarms for GSM or PC module.

The electric connection between the contacts on the electric alarms control panel and other electric panels is to be seen to by the person installing the equipment.

(\*). Check that the electric control panel combined with the electric pump is complete with clean contacts for pump running and overload signals.

TECHNICAL SPECIFICATIONS	
DESCRIPTION	VALUE
Input voltage (single-phase)	(1F+N) 230V +/-10%, 50-60 Hz
Absorbed	0,1A
Dimensions	370 x 275 x 160 mm
Protection grade	IP55
Battery	Hermetic lead
Rated battery voltage	12 Vcc
Rated battery capacity	2,3 Ah ( uncharged in 20 h)
Dimensions of battery	178 x 34 x 66 mm
Sound emission levels	75dB
Control panel weight	1,5kg

**FLOW METER KIT**

The flow meter is supplied as part of the assembly kit. The EN 12845 standard requires the presence of the flow meter for checking the hydraulic performance during the test stage and duration periodic inspections. The suction side kit are equipped with:

- Direct reading flow meter.
- On/off ball valve for diameters up to 2" inclusive, butterfly valve with lever handle from DN65 to DN100 diameter, butterfly valve with handwheel and reduction manual gear for DN125 diameter and above. Device for monitoring ON/OFF status included. Electrical connections by customer. (Valve lock kit available on request).
- Connection piping.

The meter is available in various sizes according to the flow of a service pump and suitable for being connected to the offtake of the head manifold. For a correct match, identify the type as shown in the set size tables. The flow meter must be installed, where possible, in a stretch of piping with a steady flow and sufficient back pressure at the discharge outlet. The assembly and the discharge piping towards the tank and discharge outlet are to be seen to by the person installing the equipment.

## PRIMING TANK

The priming tank is used in suction lift installations and carries out the function of maintaining the pump body and suction pipe full of water even if there are leaks through the bottom valve.

Each pump must have its own independent priming tank, placed at a higher level than the pump. The tank must be connected to a water source for adding water and keeping it full. The diameter of the connecting pipe to the pump depends on the use class. The return piping for re-circulation can be connected to the tank, which must also provide for discharge if it is too full.

A level indicator automatically actions the service pump if the level of the tank drops and is not reintegrated.

The hydraulic connections must be seen to by the person installing the equipment.

The horizontal 500 l tank is made of zinc-plated steel.

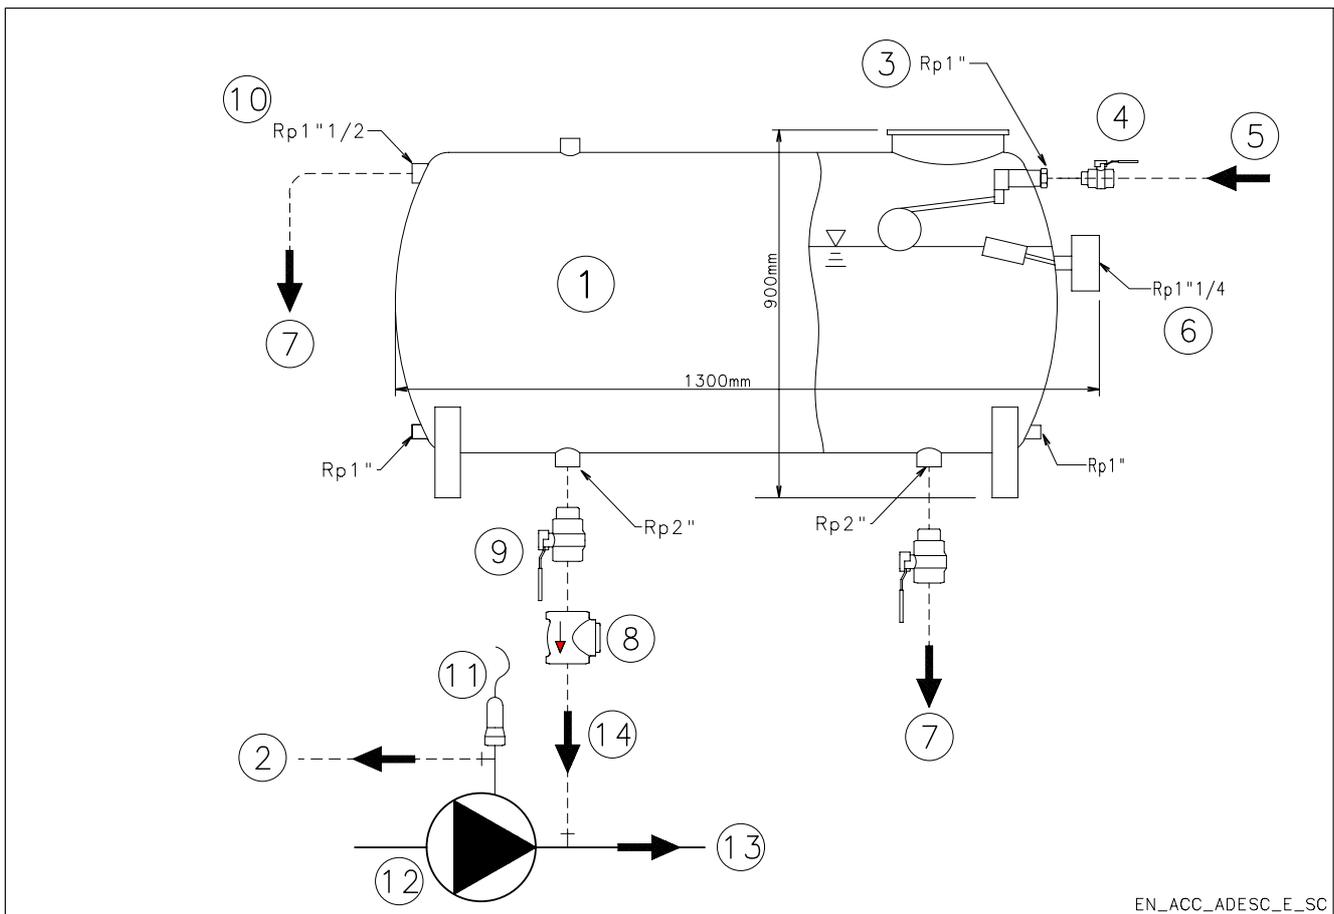

## ACCESSORIES PRIMING TANK KIT

The available accessories kit includes:

- Filling and discharge valves, reductions, non-return valve, closing plugs and automatic air discharger.
- Float switch tap complete with ring nut for fixing to the hole through the tank.
- Level indicator to connect to the electric panel and assembly instruction sheet.

Available on request tank support, height 75, 100, 150, 200 cm.

Example of connection to the tank and accessories:

EN\_ACC\_ADESC\_E\_SC

N°	DESCRIPTION	N°	DESCRIPTION
1	Pump priming tank	8	Priming supply non return valve
2	Pipe return from pump delivery side	9	Priming supply on-off valve
3	Floating valve	10	Over flow
4	In flow on-off valve	11	Pressure switch
5	In flow	12	Pump
6	Low level switch	13	To trunk main
7	Drain	14	Pipe connection to delivery side of the pump

## ELECTRIC JOCKEY PUMP KIT

The jockey pump or compensation pump has the job of keeping the system under pressure and compensating for any small loses without the intervention of the service pumps. In fact, the jockey pump is commanded by an automatic shut-off panel. Should an electric jockey pump of a different size from the standard be required or should it be installed later on sets which are not predisposed, or should non-standard different size requirements be required, it is possible to configure the booster set with just the service pumps and add the electric jockey pump, also later on.

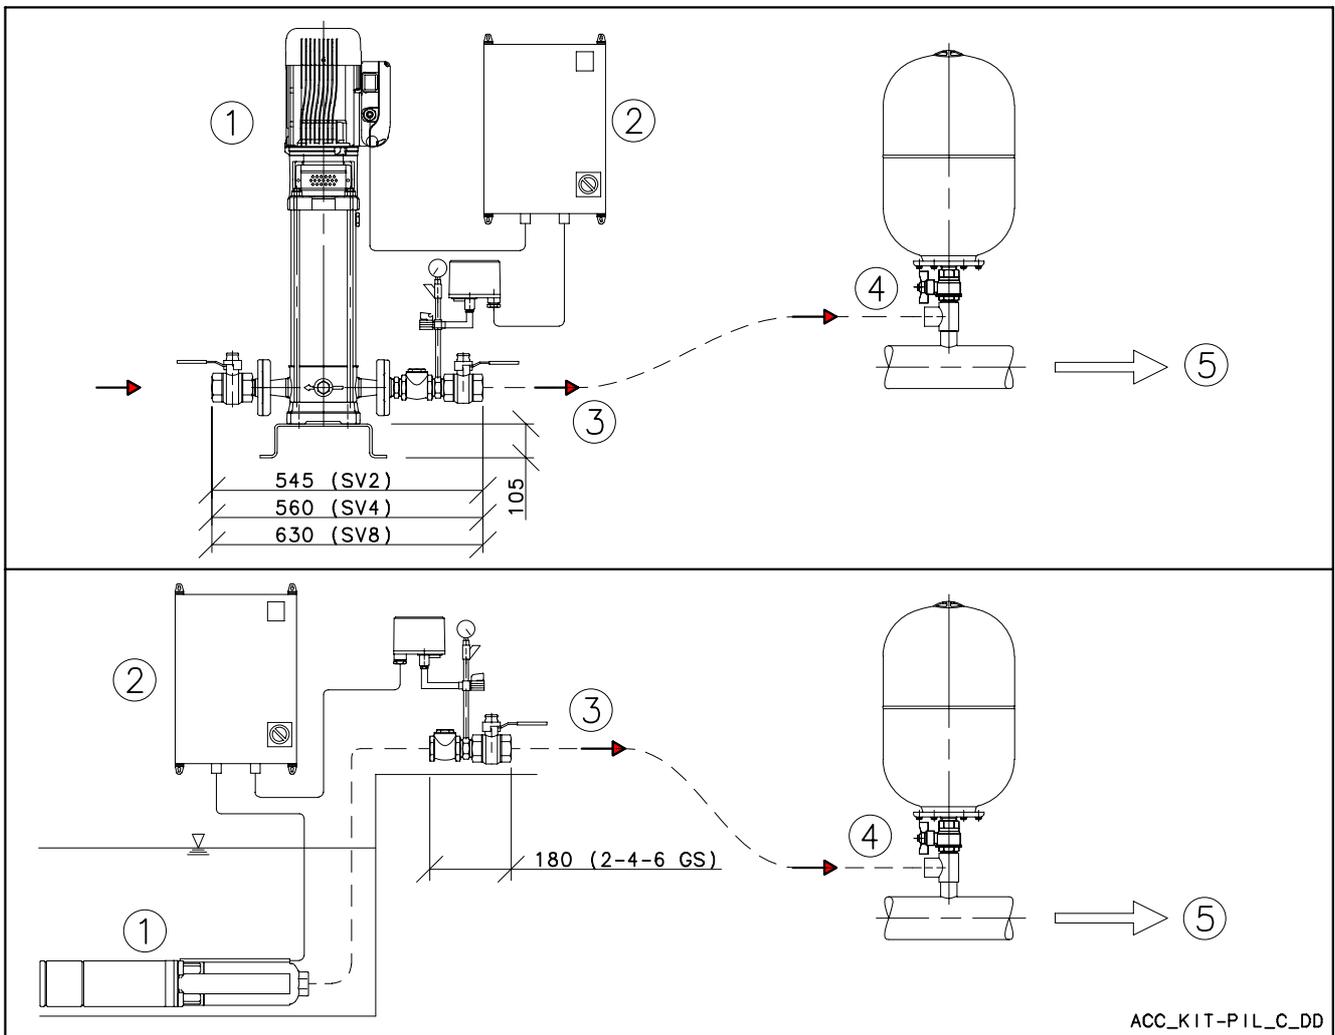

The kit includes:

- the hydraulic components for installing the electric pump (base, valves, pressure switch).
- the pre-chosen electric pump and the relative electric panel.

The hydraulic connection to the set can be easily carried out using one of the couplings on the delivery manifold for the membrane tanks using an adaptor.

Kits are available for the vertical electric jockey pumps SV2, SV4, SV8 series and submersed series 2GS, 4GS, 6GS.

The diagram illustrates some connection examples:

## **PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS**

**Description – EN 12845 fire-fighting booster set**

**Series : GEN**

**Model: electric service pump  
jockey or compensation pump**

**The pump station will comprise the following components:**

- N°1 electric jockey pump;
- N°1 electric service pump;
- One electrical power and control panel for the electric service pump;
- One electrical power and control panel for the electric jockey pump;
- Components and materials required for perfect operation and assembly;

**ITT Lowara booster sets are CE-certified and comply with the following directives:**

- **Machinery Directive 98/37/EC.**
- **Low Voltage Directive 2006/95/EC.**
- **Electromagnetic Compatibility Directive 89/336/EEC as amended.**
  - **The hydraulic pump complies with the following standard:**
- **ISO 9906-A Rotodynamic pumps – hydraulic performance acceptance tests.**
  - **The fire-fighting booster set complies with European standard EN 12845-2009 :  
Fixed fire-fighting installations  
Automatic sprinkler systems, design, installation and maintenance.**
  - **Version with automatic switch-off according to UNI 10779 “Hydrant systems”  
design, installation and operating.**

**PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS**

Basic version with periodic auto-test, Series GEN..A.

Electronic auto-test circuit with weekly programmer in the electrical panel of the service pump. The pump is turned on and kept working for a minute at the previously established time and date.

During this interval the check circuit checks that the pressure in the re-circulation circuit closes the pressure switch contact of the pump which is running. In the case of irregularities, the relative auxiliary self-test alarm relay available for remote signalling is activated and memorised.

The EN 12845 Standard does not provide for the presence of a self-test circuit but asks for periodic checks to be carried out by the user, hence the periodic self-test function cannot substitute the above checks.

For the precalculated HHP and HHS risk class systems and in the integrally calculated systems, the pump must be able to provide, at 140% of rated capacity, a pressure of not less than 70% of the rated pressure of the pump.

Each pump generally backs up the other even if much depends on the chosen type of water supply. If the service pump fails, or a blackout occurs, system pressure will decrease and the backup diesel pump will start. The pumps are started automatically by the pressure switches while they are manually stopped from the electrical panel (key switch).

➤ **Fire-fighting set components: electric pump**

**Electric service pump comprising:**

“End-suction” horizontal centrifugal pump, model **FHF**....., single impeller, with cast iron body and AISI316L stainless steel shaft. End suction and radial discharge ports. Impeller in AISI316L stainless steel or cast iron. Hydraulic sizes and nominal diameter DN of suction and discharge ports according to EN 733 (ex DIN 24255).

Flanging to EN 1092-2 (formerly UNI2236) and DIN2532. Maximum running pressure: 12 bar. Mechanical seal according to EN12756 (formerly DIN 24960) in Ceramic/Carbon/NBR lubricated with recirculation duct between discharge and seal housing.

The pump is directly coupled to the respective motor with an elastic spacer joint (“back pull out” version) and alignment and anchor base.

B3 three-phase electric motor with short circuit squirrel cage, totally enclosed, fan-cooled. The performance levels of the electric motors lie within what is usually referred to as efficiency class 1. Protected to IP55, insulation class F.

**PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS**
**Main characteristics of the electric service pump:**

Brand	ITT LOWARA	
Model:	FHF	
Flow rate		m <sup>3</sup> /h
Head:		m.c.a.
Pump body:	Cast iron, EN 1561-GJL-200 (JL1030)	
Seal housing:	Cast iron, EN 1561-GJL-200 (JL1030)	
Impeller:	Cast iron, EN 1561-GJL-200 (JL1030)	
Shaft:	Stainless steel EN10088-1-X2 CrNiMo17-12-2	
Elastomers:	NBR	
Mechanical seal:	Ceramic/Carbon/NBR	
Motor power:		Kw
Input voltage:	400 / 3	V
Frequency:	50	Hz
Rated current input:		A
Speed of rotation:	2900	r.p.m.
Max. ambient temp:	40	°C
Protection class:	IP 55	
Insulation class:	F	

tec\_FHF-en\_a\_tm

**Electric jockey pump comprising:**

Multi-cell vertical centrifugal Jockey pump, **SV**..... with metal parts in contact with liquid in stainless steel, pump body and shaft in AISI 304 stainless steel, impeller in AISI 304 stainless steel, mechanical seal in Carburundum/ carbon/EPDM.

Three-phase electric motor, shape B14, performance values within what is referred to as efficiency class 2, short circuit squirrel cage motor, closed aluminium casing and external ventilation, performance according to EN 60034-1, directly coupled to the vertical pump. Protected to IP55, insulation class F.

**PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS**
**Main technical characteristics of the jockey pump:**

Brand:	ITT LOWARA	
Model:	SV.....	
Flow rate:		m <sup>3</sup> /h
Head:		m.c.a.
Pump body:	Stainless steel (1.4301)	
Impeller:	Stainless steel (1.4301)	
Diffuser:	Stainless steel (1.4301)	
Shaft:	Stainless steel (1.4301)	
Outer sleeve:	Stainless steel (1.4301)	
Mechanical seal:	Silicon carbide/Carbon/EPDM	
Motor power:		Kw
Input voltage:	400 / 3	V
Frequency:	50	Hz
Rated current:		A
Speed:	2900	r.p.m.
Max. ambient temp.:	40	°C
Protection class:	IP - 55	
Insulation class:	F

 ➤ **Electric panels**
**Electric service pump panel**
**Painted metal casing (IP54) complete with:**

- General door-locking switch.
- Analogical ammeter.
- "MAN – AUT – 0" selector with extractable key only in automatic position.
- Keyboard for indicating electric voltage presence, correct phase sequence (three phase power supply), start-up request, pump functioning and no start-up, through LED lamps, lamp test button and starting and stopping buttons, according to the provisions of EN12845 paragraph 10.8.6.

**Inside:**

- 12/24V transformer for auxiliary circuits and electronic board.
- Fuse holder and fuses for power and auxiliary circuits.

**PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS**

- Line contact maker (direct start-up), line and star/delta contact makers (star/delta start-up), line contact makers and reactance switching (impedance start-up).
- Star/delta exchanger timer or reactance switching.
- Relay for signalling no phase.
- Auxiliary relays.
- Current transformer.
- Terminal boards.
- Clean contacts (max 24V, 1A) for activating acoustic/ visual alarms for no phase, pump on demand, pump running and start failure.
- Cable glands (excluding the versions to be fixed to the floor).
- Wiring diagram.

**Jockey pump electrical panel****Painted metal casing (IP55) complete with:**

- General door-locking switch.
- Visual indicators for line, running, thermal shutdown.
- Manual – automatic selector – excluded.

**Inside:**

- Transformer for auxiliary circuits at 24 V.
- Fuse holder and fuses for power and auxiliary circuits.
- Line contact maker.
- Overload cut-out switch.
- Pump shut-off timer (0 ÷ 90 s).
- Terminal boards.
- Cable glands.
- Wiring diagram.

Suitable for connecting to a float switch or a minimum pressure switch for preventing dry running. An optional level control module (supplied upon request) allows the connection of probes with the possibility of regulating the sensitivity according to the hardness of the water.

**Series of clean contacts for checking the status of the electric service pump panel, as well as the contacts already provided for signalling alarms (on request):**

- No phase.
- Motor running..
- Selector position Man-Aut-0.
- Failure to start.
- Start-up request.

**Series of clean contacts for checking the status of the electric jockey pump (on request)**

- Pump running.
- Thermal shutdown (overload).
- No water.

## PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS

### Electrical alarms panel

Plastic casing protected to IP55 with an electronic board at the front for the visual and acoustic signalling of the status of one or two service pumps. The following alarms are signalled :

#### Electric pump

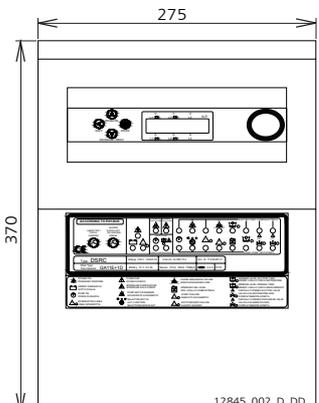

- Power off.
- Start-up request.
- Pump running.
- No start-up.

The electric panel is fitted with a buzzer with reset button, signal LED test button, battery charger and battery and is fitted out to signal the following general alarms, if present:

- General alarm for incorrect electrical connection in the exchange contacts of:
  - status of flow measurement circuit valve, drain pump, jockey pump.
- Fault in electrical connection in the exchange contact relative to panel 1 (electric pump/diesel engine pump).
- Fault in electrical connection in the exchange contact relative to panel 2 (electric pump/diesel engine pump).
- Jockey pump overload.
- Jockey pump running.
- Discharge pump overload.
- Battery voltage low.
- Communications failure with ModBus system.

GSM modem system status transmission module and RS232/485 converter module available on request.

<b>TECHNICAL SPECIFICATIONS</b>	
DESCRIPTION	VALUE
Input voltage (single-phase)	(1F+N) 230V +/-10%, 50-60 Hz
Absorbed	0,1A
Dimensions	370 x 275 x 160 mm
Protection grade	IP55
Battery	Hermetic lead
Rated battery voltage	12 Vcc
Rated battery capacity	2,3 Ah ( uncharged in 20 h)
Dimensions of battery	178 x 34 x 66 mm
Sound emission levels	75dB
Control panel weight	1,5kg

12845-002\_D\_DD

12845-qal-en\_b\_td

### ➤ Control instruments and hydraulic accessories

#### The main components of the sets are:

- On/off valves on the delivery side of each pump, ball valves with lever handle for diameters up to 1 1/4" inclusive, butterfly valve with lever handle from DN65 to DN100 diameter, butterfly valve with handwheel and reduction manual gear for DN125 diameter and above.
- Re-circulation device for each service pump.

The re-circulation device allows a minimum capacity in order to prevent the pump overheating when working with closed delivery. It includes the activation pressure switch for the alarms of the pumps running, the test valve for checking the seal of the check valves, the couplings for any connecting pipes to the priming tank in the case of suction lift installation. The connection of each re-circulation to the suction tank or the priming tank is to be seen to by the person installing the equipment.

**PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS**

- Pressure gauge on the delivery side of each service pump between check valve and on/off valve.
- Check valve be inspected type, on the delivery side of each pump. Threaded connector up to and including a diameter of 1 1/4". Flanged connector for larger diameters.
- Painted iron delivery manifold (PN 16) and threaded stubs with relative caps for connecting any 24 litre membrane tanks. Blind and welding zinc-plated flanges.
- Two start-up pressure switches for every service pump.  
For the electric service pumps, start-up takes place through the pressure switch, but it must be manually stopped using the key-operated selector switch on the panel (excluding the version with automatic shut-off).  
For the electric jockey pump, if present, both start-up and stopping are determined by the pressure switch.
- Start-up pressure switch circuit for the service pump, including connecting pipes for the delivery manifold, recirculation circuit. This circuit includes on/off valve, a non-return valve, a discharge or test valve and various pipe fittings. The configuration of the circuit allows the pressure switch to intervene also when the relative on/off valve is closed.
- Various pipe fittings (copper, zinc-plated steel).
- Base made of bent sheet or structural iron with epoxy powder painting RAL 5010.
- Control panel frame made of structural iron with epoxy powder painting RAL 5010.

The control panels for the electric pumps up to 55 kW power supply are fixed on bracket. For higher powers, the control panels for electric pump service are floor mounted, instead the jockey electric pump panel is wall mounted fixed.

- Electric panel for each electric service pump.

## PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS

### Flow meter

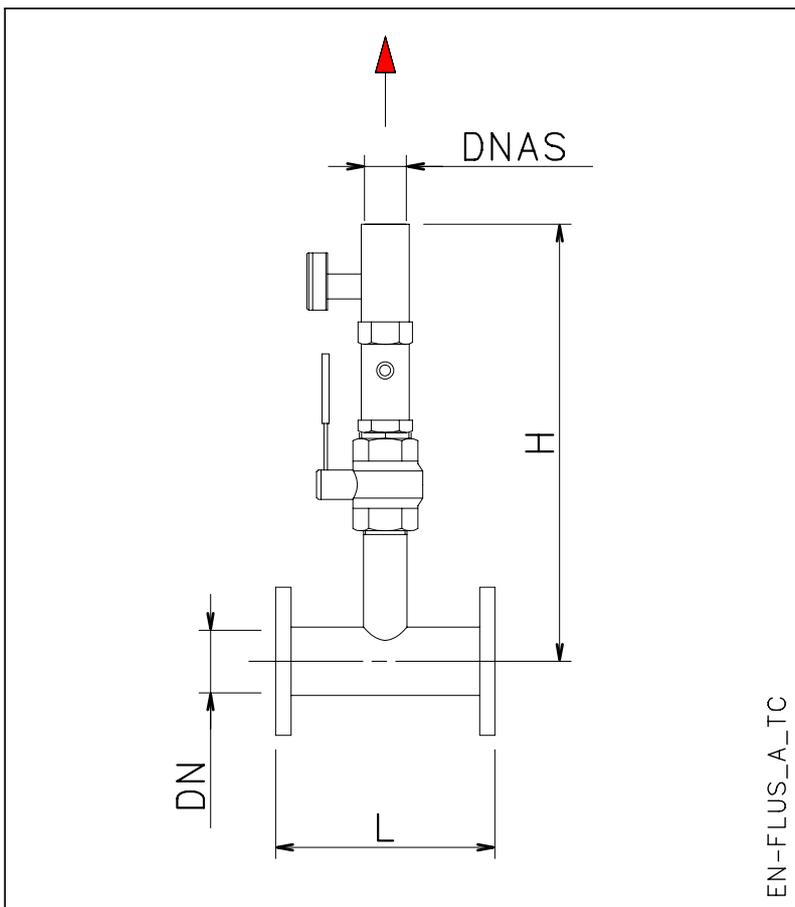

The flow meter is supplied as part of the assembly kit. The EN 12845 standard requires the presence of the flow meter for checking the hydraulic performance during the test stage and duration periodic inspections. The kit comprises:

- Direct reading flow meter.
- On/off ball valve for diameters up to 2" inclusive, butterfly valve with lever handle from DN65 to DN100 diameter, butterfly valve with handwheel and reduction manual gear for DN125 diameter and above.
- Straight plastic connection piping.

The flow meter is available in various sizes according to the flow of a service pump and suitable for being connected to the offtake of the head manifold. For a correct match, identify the type as shown in the set size tables.

The assembly and the discharge piping towards the tank and discharge outlet are to be seen to by the person installing the equipment.

**The following illustration shows the type and size of flow meter:**

#### Dimensions (mm):

 DNAS =  
 L =  
 H =  
 Qmax (m<sup>3</sup>/h) =

## PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS

### Diaphragm tanks

The booster sets are ready for installation, directly on the manifold, of 24-litre diaphragm tanks, one for each pump. The sets are also equipped with caps to close off the unused couplings. Larger tanks can also be connected to the unused end of the discharge manifold.

The kit is made up of the following accessories:

- Diaphragm tank;
- On-off ball valve;
- Instructions manual;
- Packaging.

### Suction kit

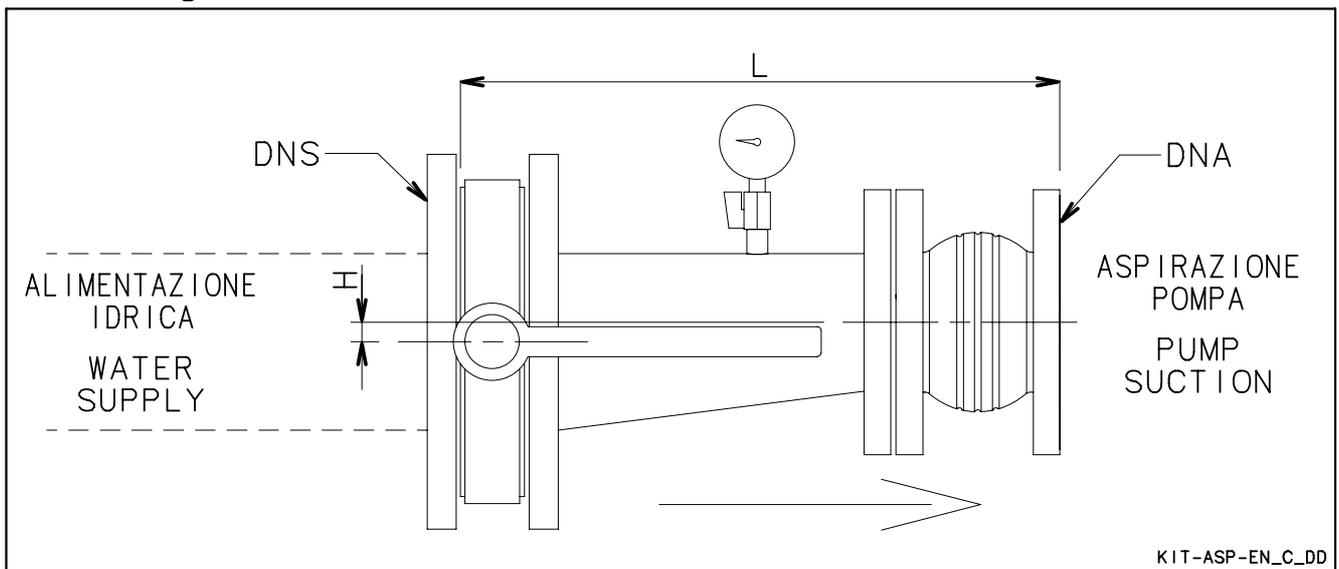

The EN 12845 fire-fighting booster sets are supplied without valves and stubs on the suction side of the service pump and can be completed with suitable kits that depend on legal standards.

These requirements are expressed by EN 12845 (chapter 10.5 and chapter 10.6) and are connected with the maximum speed value of the water in the pipes, their minimum section and type of installation - suction lift or positive suction head. To provide for one suction kit for each duty pump.

The kit comprises:

- Anti-vibration joint to attach to the pump inlet.
- On/off butterfly valve with lever handle for diameters up to DN100, butterfly valve with handwheel and reduction manual gear for DN125 and higher.
- Eccentric cone.
- Vacuum pressure gauge.
- Weld-on flange.

**The following illustration shows the suction kit:**

## **PRODUCT DESCRIPTION BY TECHNICAL SPECIFICATIONS**

- **The set is supplied already assembled, calibrated and factory tested. The set is supplied complete with an instruction manual, pump manuals and wiring diagrams for the panels. For the sets including floor panels, the electric panels are sent together with the set in a separate pack and supplied with 5-metre long connecting cables (longer lengths available on request). The fitter is responsible for preparing the routes and installing the cables.**

**ITT Lowara part of ITT Corporation and headquarters of "Residential and Commercial Water - EMEA".**

World leading in offering high reliable fluid handling solutions for Building Services, Irrigation and Industrial applications. We provide a complete range of high quality pumps, packaged systems and controls and are specialized in engineering and manufacturing stainless steel products.

ITT Lowara is headquartered in Vicenza, Italy and operates in more than 80 countries across the world with own plants in Italy, Austria, Poland and Hungary. The company has 1.300 employees and generated 2008 sales exceeding \$440 million. ITT Lowara is wholly owned by the ITT Corporation of White Plains, New York, and is the EMEA headquarter of ITT's Residential and Commercial Water division. ITT Corporation is a high-technology engineering and manufacturing company operating on all seven continents in three vital markets: water and fluids management, global defense and security, motion and flow control. ITT Corporation generated 2008 sales of \$11.7 billion
