INTRODUCCIÓN INTRODUCTION

S&P - THE COMPANY

Soler & Palau was founded in 1951 in Ripoll (Spain) and since this date has become one of the world's leading companies engaged in the manufacture, sales and distribution of all types of ventilating and air moving products. Today Soler & Palau has 19 production plants and 37 wholly owned commercial subsidiary companies located across the globe. Supporting the design, development production and commercial facilities are a professional team of more than 3600 employees who ensure that Soler & Palau continue to have an active presence in all global market sectors.

S&P - THE STRATEGY

At the heart of Soler & Palau's company strategy is the continued substantial investment in product and manufacturing research, development and quality control. Since 1951 the sustained investment in these critical areas has enabled Soler & Palau to offer to its customers products with unparalleled quality and reliability. These critical elements of success today form the fundamental cornerstones of the company's strategy for growth within increasingly competitive global markets.

Today Soler & Palau has several teams of highly qualified engineers working in areas such as product and manufacturing technology research, development, innovation and production. The engineers work closely with international safety standards agencies to ensure that all of Soler & Palau's products are manufactured and supplied in accordance with only the very latest mechanical and electrical safety standards. All products are extensively tested with the company's comprehensive in-house airflow, acoustic and environmental test laboratories which have been officially certified by AENOR to EN-45001-89 standards. Currently Soler & Palau hold both ISO 9001:2000 and ISO 14001:1996 certifications and were also the first company in Spain to be registered to the original ISO 9000 standards.

Through operating a continual rigorous program of new and existing product development and improvement means that Soler & Palau's customers are assured that they will continue to receive products of only the very highest quality and reliability both now and in the future.

S&P - LA EMPRESA

Desde su fundación en el año 1951, en la localidad de Ripoll (España), Soler & Palau se ha convertido, desde hace ya bastantes años, en uno de los líderes mundiales en la fabricación y venta de todo tipo de equipos de ventilación y de extracción de aire.

El grupo S&P lo constituyen 19 plantas productivas y 37 empresas filiales propias de comercialización, ubicadas en diversos países y continentes constituyen el actual Grupo S&P que, con un cualificado equipo de más de 3.600 personas, ejerce su actividad en todos los países del mundo.

S&P - LA ESTRATEGIA

Investigación y Desarrollo de productos y tecnología propios; Calidad de producción por encima de la media de su campo de actividad y Vocación de Expansión sostenible son, y han sido entre otros, tres de los pilares fundamentales sobre los que descansa la trayectoria de Soler & Palau. Contar hoy con diversos equipos de Ingenieros titulados en las áreas de Investigación, Desarrollo, Innovación y Producción; Certificaciones ISO 9001:2000 y 14001:1996 acreditadas por AENOR (Soler & Palau fue la primera empresa registrada en España); Laboratorios propios de ensayo con certificación oficial EN-45001-89 y crecimientos anuales, sostenidos en las últimas décadas, muy superiores a los de su mercado son algunos de los logros de la correcta aplicación de la mencionada estrategia de empresa. Nuevos y apasionantes proyectos que verán la luz muy en breve, están hoy en marcha en el Grupo S&P.

ISO-9001:2000
ISO-14001:1996

S&P - THE PRODUCTS ELECTRICAL CHARACTERISTICS

All Rotorex series fans incorporate, as standard, asynchronous external rotor motors. All motors are manufactured in accordance with EN-60034-1 standards. The standard Rotorex models are available with single phase 230V +/- 6% 50Hz or three phase 230/400V +/- 6% or 400V Δ +/- 6%, 50Hz motors. Motors suitable for voltages, up to 500V, are available on request. Whilst the standard motors supplied operate at a frequency of 50Hz the majority of motors can also be supplied, on request, as suitable for operating at 60Hz – please enquire. All Rotorex series motors include Class F winding insulation manufactured in accordance with EN 60034-1 standards. All motors are fitted with automatic-reset thermal protector which is located inside the motor winding. On single phase models the thermal protector is integrated within the main motor winding circuit and has automatic reset, where-as all three phase models have external leads which *have to be connected to third party protection devices* (see wiring diagram below). All models include an earth connection which is built into the cable cord or the terminal box dependant upon the model configuration. Models fitted with a single phase motor and terminal box include a pre-wired permanent- split capacitor as standard.

Working conditions

- All catalogued and product data-plate references of electrical Power/Amps and Rpm's correspond to the fan's maximum permissible load, indicated as "H" in catalogue. All airflow and electrical measurements shown have been measured in Soler & Palau's in-house, ENAC accredited, test laboratories. All fans have been tested with a bell mouth inlet plate condition and the results corrected to a motor constant operating temperature.
- The fan must not work beyond those values stated in nameplate and within conditions approved by the manufacturer.
- It is considered S1, continuous operation, nominal working conditions. Any Control installed, must not allow extreme on/off switching.
- Except stated in contrary sense, all motors accept speed control devices by voltage regulation (either phase cutting or transformer). Most probably, resonance vibration or magnetic noise may be noticed.
- In any case, Soler&Palau recommend the use of sinusoidal output transformers.
- Our HRS and HRB Series, as well as HR with "E22" specification, are suitable for operation with frequency inverters (VFD), when following:

S&P - LOS PRODUCTOS CARACTERÍSTICAS ELÉCTRICAS

Los motores eléctricos asíncronos de corriente alterna utilizados en la gama Rotorex son del tipo de rotor exterior, construidos según EN-60034-1. Las tensiones de alimentación previstas como standard son: 230 V +/- 6% monofásica y 230/400 V +/- 6% ó 400 V Δ +/- 6%, como trifásica. Otras tensiones distintas hasta 500 V son posibles bajo demanda. La frecuencia standard es 50 Hz. También bajo demanda 60 Hz en la mayoría de modelos. La clase térmica de los motores es "F" (según EN 60034-1). Todos los motores van dotados de protector térmico del tipo de rearme automático. Los monofásicos en el interior del devanado y los trifásicos con **cables al exterior para gobernar una maniobra externa** a incorporar por el usuario del producto (ver diagrama conexiones más abajo). La toma de tierra está incorporada en el cable manguera o bien en la caja de bornes de conexión. En los motores monofásicos, con caja de bornes, el condensador eléctrico permanente está incorporado en la misma.

Condiciones de funcionamiento

- Los valores de potencia/corriente absorbida y r.p.m. dados en la placa de características corresponden al punto de máxima carga "H" y se han medido en el túnel de ensayo aerodinámico empleando aparatos con embocadura técnica y térmicamente estabilizados.
- El ventilador no puede funcionar más allá de los valores indicados en su placa de características y para las aplicaciones indicadas en el pedido o autorizadas por el fabricante.
- Se considera S1, funcionamiento continuo, como condición standard de funcionamiento. Cualquier control empleado, debe aplicar una conmutación paro/marcha moderada.
- Salvo indicación en sentido opuesto, todos los motores aceptan regulación de velocidad por reducción de voltaje (corte de fase o por transformador). Con mucha probabilidad, podrá aparecer vibración por resonancia y ruido eléctrico.
- En todo caso, Soler&Palau, recomienda el uso de transformadores de salida senoidal.
- Nuestras series HRS y HRB, así como los HR con especificación "E22", son adecuadas para funcionamiento con variadores de frecuencia, con las siguientes premisas:
 - ✓ Instalación entre convertidor y motor de filtros senoidales entre fases y fase-tierra.
 - ✓ Longitud y tipo de cables de acuerdo al fabricante del filtro.
 - ✓ Filtros supresores du/dt, no reemplazan la función de filtros senoidales.

* INTERCHANGING ANY TWO PHASES THE ROTATION SENSE CAN BE REVERSED.
INTERCAMBIANDO DOS FASES SE CAMBIA LA DIRECCIÓN DE ROTACIÓN.

* DIAGRAM VALID FOR ALL THE MOTORS, WITH THE EXCEPTION OF THE 8 POLES
ESQUEMA VÁLIDO PARA TODOS LOS MOTORES, EXCEPTO LOS DE 8 POLOS

✓ Installation of sinusoidal filters between VFD and motor effective on all phases (including earth).

✓ Length and cable type according to filter manufacturer recommendations.

✓ Du/dt filters cannot replace the function of sinusoidal filters.

- Soler&Palau cannot guarantee the proper compatibility between motors and control devices. Thus, we strongly recommend previous homologation by getting in touch with your commercial representative.

STORAGE AND MAINTENANCE

HRS, HRB and HR Series have been designed and manufactured to be installed as a component in Air Conditioning, Heating, Ventilation,...machinery. Therefore cannot be considered as ready-to-use products. Once they are properly installed under owner's responsibility, do comply with the following standards:

- Low Voltage Directive 2006/95/CE

- Machinery Standard 2006/42/CE

- Standard for Electromagnetic Compatibility 2004/108/CE

Do read carefully Instructions Manual supplied with the product, with special regard on the following:

- Store product in a clean and dry place, for a maximum period of 1 year as a maximum in order to guarantee its lifetime. Same applies to outdoor products.

- In case outdoor fan will remain disabled for extended period of time, it is necessary to be switched on in order to remove humidity inside the motor.

- For special applications or environments, there might be special maintenance instructions to be specified by manufacturer.

MECHANICAL CHARACTERISTICS

All Rotorex fans are constructed with either IP44 or IP54 protection (dependant upon the model) in accordance with EN 600529 – category 2 standards. However, the IP rating must be tested when fitted into the end appliance in which it is intended to be used. All Rotorex models include sealed-for-life ball bearings assemblies of the closed type 2Z which have a normal temperature operating range between: - 40° to + 70°C. The "Life Expectancy" (L10) of the bearings, +40,000 hours, has been tested with the motor shaft working in a horizontal position and with a maximum ambient air stream temperature set at + 40°C. For other specific operating conditions – please consult.

The upper limit of the air stream temperature (Tmax.) is indicated in the Technical Characteristic chart of each fan model. The lower limit of the air stream temperature is, for the standard construction, - 15° C.

When the fan is controlled by inverter or voltage, the maximum air stream temperature must be 10° C less than the indicated value shown in the Technical Characteristic chart.

Condensation holes are provided, the purpose of such is to prevent any accumulation of condensation within the motor when operating in particularly humid conditions or when the surrounding environment experiences rapid temperature changes. These drainage holes have to be opened when the fans are installed at their end position.

- En todo caso, Soler&Palau no garantiza la compatibilidad de sus motores con cualquier modelo de regulador/controlador. Recomendamos la homologación previa contactando con nuestros servicios técnico-comerciales.

ALMACENAMIENTO Y MANUTENCIÓN

Las series HRS, HRB y HR, han sido diseñados y fabricados para aplicación final en maquinaria de Aire Acondicionado, Calefacción, Ventilación, y otras. Por ello no puede ser considerado producto final. Una vez debidamente instalados y bajo responsabilidad del propietario, están en condiciones de cumplir las siguientes Directivas:

- Directiva de Baja Tensión 2006/95/CE

- Directiva de Máquinas 2006/42/CE

- Directiva de Compatibilidad Electromagnética 2004/108/CE

Lea atentamente las instrucciones de uso proporcionadas con el producto, en especial:

- Almacene el producto en ambientes secos y protegidos, durante 1 año como máximo para garantizar una vida adecuada. Lo mismo aplica en caso que sea producto válido para intemperie.

- A su vez, en el caso que productos de intemperie estén parados por un período de tiempo extenso, estos deben funcionar periódicamente para expulsar humedad condensada en el interior.

- Para aplicaciones o ambientes especiales, pueden considerarse condiciones de mantenimiento específicas a detallar por el fabricante.

CARACTERÍSTICAS MECÁNICAS

La ejecución standard de los motores Rotorex es en su mayoría IP44 ó IP54 (EN 600529 – categoría 2). No obstante el grado de protección definitivo deberá ensayarse con el ventilador acoplado al equipo final en que se utiliza. Los rodamientos a bolas son del tipo cerrado 2Z y sus límites de uso son entre: - 40° a + 70° C. La "Life Expectancy" L10 de los rodamientos funcionando con el eje motor en posición horizontal y con una temperatura máxima del aire transportado de + 40° C es de unas 40.000 h - Para condiciones de funcionamiento distintos, consultar.

El límite máximo de temperatura (Tmax.) del aire transportado se indica en las tablas de Características Técnicas de cada ventilador. El límite mínimo es, para la ejecución estándar, de - 15° C. Con regulación por convertidor de frecuencia o corte de fase, la temperatura máxima será 10° C menos que la indicada en cada ventilador.

Cuando se instalen los ventiladores con el eje en posición vertical, deberá procederse a la apertura de los agujeros de evacuación de condensaciones internas del motor previstas al efecto en la carcasa.

La caja de bornes ofrece un grado de protección IP55, con especial atención de ajustar bien la junta de goma de la tapa, así como la entrada de cable.

El conjunto rotor y hélice está dinámicamente equilibrado a dos planos (G 6,3) según la norma ISO 1940 part. 1.

Connection box offers IP55 protection, while cover gasket is correctly placed and cable glands strongly tightened.

The Rotorex motor rotors and propellers assemblies are dynamically balanced, in two planes, (G 6,3) in accordance with ISO 1940 part 1 standards.

TESTING CONDITIONS

The Rotorex series technical data as shown in this catalogue has been obtained using standard 230V 50Hz single phase or a three phase 400V 50Hz motors. Air flow / Pressure Performance.- All Rotorex fans have been tested for airflow performance in accordance with ISO 5801 and AMCA-210 standards, with dry air at 20°C, 1,2 kg/m³ density and at an atmospheric pressure of 760 mmHg. The airflow tests have been conducted with the fans mounted in conjunction with an optimised bell-mouth air inlet plate; with motor support and with type B airflow direction. Sound Level Performance.- The fans have been tested for sound level performance in accordance with ISO-13347-3 standards from the air inlet part of the fan and at the airflow / pressure point as indicated in the catalogue.

DISPOSICIONES DE ENSAYO

Los datos técnicos de la Serie Rotorex indicados en el catálogo se han obtenido a 230 V monofásica , 50 Hz ó 400 V trifásica, 50 Hz.- Caudal / Presión, por ensayo en los laboratorios S & P de aerodinámica y de acuerdo con las normas ISO-5801 y AMCA 210, todas ellas con aire seco a 20 °C, densidad 1,2 kg/m³ y a 760 mm Hg.Las pruebas se han realizado con los ventiladores montados en una embocadura técnica-mente óptima, con soporte motor y flujo de aire B.- Potencia sonora, por ensayo en la cámara anecoica semireverberante de los laboratorios S&P de acústica y según normas ISO-13347-3 y en el punto de caudal / presión indicado en el catálogo lado de aspiración del aire.

Ventiladores Axiales

ROTOREX AXIAL FANS

The new generation of OEM, Rotorex Axial Fans from 200 to 1000 mm diameters.

Construction / Construcción **S**

Construction / Construcción **Q**

After extensive market and customer research Soler & Palau has developed a new generation of Rotorex Axial Fans. Using the company's extensive experience within the global market, the new Rotorex range has been specifically designed to meet and exceed the demands of the international OEM customer. The implementation of high performance technically specified products along with a flexible manufacturing policy have been critical to the success of the new range.

VENTILADORES AXIALES ROTOREX

La Nueva Generación de Ventiladores Axiales para OEM's de 200 a 1000 mm diámetro.

Construction / Construcción **PN / ZN**

Construction / Construcción **Z**

Después de un detallado estudio Soler & Palau ha desarrollado una "Nueva Generación de Ventiladores Axiales Rotorex", que utilizando la larga experiencia de diseño y fabricación de producto acumulada y ya ampliamente experimentada en numerosos y diversos mercados. Esta nueva generación ha sido especialmente enfocada para satisfacer las más altas exigencias del mercado OEM y poderse adaptar flexiblemente a las necesidades individuales de cada producto del cliente consumidor.

The enclosed catalogued pages illustrate details of the range of standard model sizes available. However because all the major components used within the new Rotorex fans (motors, impellers, guards etc) are manufactured by Soler & Palau some aspect of the product can be adapted to precisely match a given customers fan specifications.

This new generation Rotorex series can be supplied in two distinct versions both of which have different generic characteristics as follows:

- HR Series: 5 sickle blade propeller, manufactured from pressed aluminium sheet.
- HRS Series: 7 sickle blade impeller manufactured from die cast aluminium and adjustable pitch angle.
- HRB Series: High volume airflows for long-distance projection achieved by optimized straight aerofoil bladed impellers; improved cost/airflow ratio and full sturdy construction.

The new Rotorex axial fans have been specifically designed to be used as component parts within third party OEM products. As such Soler & Palau have designed and manufactured these fans to comply with the: "Electromagnetic Compatibility" 89/336 EEC and 92/31 EEC and, "Low Voltage" 72/23 EEC and 93/68 EEC European Directives once they have been installed in the final product. It is therefore important that the final OEM appliance is tested and certified by the appliance manufacturer according to EN-60555-2 and EN 60335-1 standards. Soler & Palau do not accept any responsibility in the failure of the products supplied which have resulted from the non-compliance of the final customers appliance.

Sobre unas prestaciones base de catálogo, la amplia posibilidad de adaptación de las prestaciones de los motores eléctricos S&P con que van equipados permiten, con la colaboración de nuestros laboratorios de ensayos de producto aplicado, alcanzar el óptimo resultado al adaptarse perfectamente a las especificaciones del equipo de cada cliente de manera personalizada (customized product).

Esta Nueva Generación se ha estructurado en dos series de producto cuyas características claramente diferenciales son:

- Serie HR: Hélice de 5 alabes fabricados en chapa de aluminio.
- Serie HRS: Hélice de 7 alabes fabricados en aluminio inyectado, con ángulo ajustable.
- Serie HRB: Potencia, proyección de aire (dardo); mejor ratio m³/h/Euro, robustez.

Los ventiladores Rotorex están conceptualizados como componentes y están destinados a incorporarse a los productos acabados finales fabricados por los clientes (OEM's) consumidores.

Soler & Palau ha diseñado y fabricado estos ventiladores para que puedan cumplir con las Directivas Europeas de: "Compatibilidad electromagnética" 89/336 EEC y 92/31 EEC y de: "Baja Tensión 72/23 EEC y 93/68 EEC una vez hayan sido incorporadas a dichos productos finales. Estos cumplimientos deberán verificarse por el fabricante del equipo final al que van incorporados los ventiladores, ensayando dicho equipo final según EN-60555-2 y EN 60335-1.

Soler & Palau declina cualquier responsabilidad por la inobservancia de estas comprobaciones antes de la puesta en marcha de los equipos finales.

MODEL DESCRIPTION

The part code descriptions are composed of the following:

HR/HRS/HRB [1] / [2] - [3] - [4] [5] [6] [7]

[1] Motor type

- B Singlephase with capacitor
- T Three-phase

[2] Number of motor poles (nominal speed)

- 2: (2800 rpm)
- 4: (1400 rpm)
- 6: (900 rpm)
- 8: (700 rpm)
- 12: (450 rpm)

[3] Impeller Diameter / Blade pitch angle

- HR Series: sizes 200 to 710 mm
- HRS Series: sizes 630 to 1000 mm
- HRB Series: sizes 630 to 800 mm

[4] Airflow direction

- A: Motor – Propeller
- B: Propeller - Motor

[5] Connection type

- 0: if nothing is indicated = Terminal box (with capacitor included in single phase)
- M: Flying lead, standard 500mm (capacitor is not included in single phase models and must be ordered separately)

[6] Construction

- A: Motor-propeller with square wall plate and grill fitted to the bottom of the square wall plate.
- N: Motor-propeller with flat grill
- PN: Motor-propeller with deep / basket grill
- S: Motor-propeller without grill
- Z: Propeller-motor with square wall plate and grill fitted to the wall plate involute
- Q: Motor-propeller with round short case and grill
- ZR: Motor-propeller with circular wall plate and grill fitted to the wall plate involute.
- ZN: Motor-propeller with grill fitted to the wall plate involute.

[7] Voltage

- 230V 50Hz
- 400V Δ 50Hz
- 230/400 V 50Hz
- 230V 60 Hz
- 400/460V Δ/λ 60 Hz
- 265/460V 60 Hz

NOMENCLATURA MODELOS

La nomenclatura de los modelos está integrada por los siguientes conceptos:

HR/HRS/HRB [1] / [2] - [3] - [4] [5] [6] [7]

[1] Motor

- B Monofásico con condensador
- T Trifásico

[2] Número Polos Motor

- 2: (2800 rpm)
- 4: (1400 rpm)
- 6: (900 rpm)
- 8: (700 rpm)
- 12: (450 rpm)

[3] Diámetro hélice / Inclinación pala

- Serie HR: 200 a 710 mm
- Serie HRS: 630 a 1000 mm
- Serie HRB: 630 a 800 mm

[4] Dirección Flujo – Aire

- A: Motor – Hélice
- B: Hélice - Motor

[5] Tipo de Conexión

- 0: Si no se indica nada = Caja de bornes (con condensador incluido en los monofásicos)
- M: Cable manguera (no incluye condensador en los monofásicos)

[6] Construcción

- A: Motor-hélice con embocadura y reja en la base de la embocadura.
- N: Motor-hélice + reja plana
- PN: Motor-hélice + reja profunda
- S: Motor-hélice sin reja
- Z: Hélice-motor con embocadura y reja apoyada en cuello embocadura
- Q: Motor-hélice con camisa circular y reja
- ZR: Motor-hélice con embocadura circular y reja cuadrada en cuello.
- ZN: Motor hélice + reja para apoyar en cuello embocadura.

[7] Voltaje

- 230 V 50 Hz
- 400 V Δ 50 Hz
- 230/400 V 50 Hz
- 230V 60 Hz
- 400/460V Δ/λ 60 Hz
- 265/460V 60 Hz

Speed controllers Reguladores de velocidad

S&P speed controllers are of electromechanical transformer type with five contacts of senoidal output.

SINGLEPHASE RMB RANGE (230 V)

Has, as well as 5-position manual speed control, another position for automatic function in combination with an external 5-position thermostat (this thermostat is not included in the speed control).

THREE-PHASE RMT RANGE (230/400 V)

Manual speed control with five senoidal contacts.

Los reguladores de velocidad S&P son del tipo electro-mecánico por transformador, con cinco tensiones de salida senoidal.

GAMA MONOFÁSICA RMB (230 V)

Dispone, además de la regulación manual de 5 posiciones, de otra posición para funcionamiento automático en combinación con un termostato externo de cinco posiciones (este termostato no se incluye en el regulador).

GAMA TRIFÁSICA RMT (230/400V)

Regulación manual con cinco tensiones de salida senoidal.
